

Name: Adhithya K

Department: Computer Science and Engineering

Company placed: Walmart Global Tech India

Job Position: Software Engineer 2

Round 1: Online Test

Time Duration: 60 minutes

Platform: HackerEarth

Pattern:

- 1) 10 technical MCQs belonging to OOPS, OS, DBMS, Networks and SQL
- 2) 2 Coding questions of medium-hard level

Level of difficulty: Medium-Hard

Resources you referred to: GeeksforGeeks, Interviewbit.

How did you handle the questions: I read the entire question twice. Then I tried to rephrase the questions and recalled the concepts related to it. By doing this I was able to answer all the questions with good accuracy.

Tips you would suggest for your juniors to pass this round: This is the most important round hence one should be strong in CS fundamentals and data structures.

Count of people shortlisted after this round: 20 students were shortlisted for the next round

Round 2 : Technical Interview

Time Duration: 50-60 minutes

Platform: Zoom

Level of difficulty: Medium-Hard

I was asked to introduce myself and then we went straight to the technical questions.

Coding questions asked:

- 1) Find if a number is prime number or not (I was asked to explain all possible solutions with detailed time and space complexities).
- 2) Given a binary tree in which each node element contains a number. Find the maximum possible path sum from one leaf node to another leaf node (I was asked to explain all possible solutions with detailed time and space complexities). (Tree)
- 3) Max length Chain - You are given N pairs of numbers. In every pair, the first number is always smaller than the second number. A pair (c, d) can follow another pair (a, b) if $b < c$. Chain of pairs can be formed in this fashion. You have to find the longest chain which can be formed from the given set of pairs. (DP)
- 4) I was given 3 aptitude questions based on speed-distance-time, LCM-HCF and Profit-Loss.
- 5) Various questions on Threading, Paging, Java fundamentals, OOPS, SQL were asked.

Tips: Prepare the CS core subjects very well as they are equally important as DSA.

Round 3: Technical Interview 2

Time Duration: 1.5 hours

Platform: Zoom

Level of difficulty: Medium-Hard

I was asked to introduce myself and then we went straight to the technical questions.

Coding questions asked:

- 1) Print the tree nodes in zigzag manner. (Tree DS)
- 2) Write a function to get the intersection point of two Linked Lists (I was asked to explain all possible solutions with detailed time and space complexity analysis). (Linked List DS)
- 3) Binary Tree to Doubly Linked List (Tree and DLL)
- 4) Given a list of unique words, return all the pairs of the distinct indices (i, j) in the given list, so that the concatenation of the two words (words[i] + words[j]) is a palindrome. (Trie DS).
- 5) Various questions related to Java, OS, OOPS and Networks.

Tips: Always start answering the questions with Brute-Force approach, and then optimize the solutions.

Round 4: HR Interview

Time Duration: 30 mins

Platform: Zoom

- 1) I was asked questions based on my resume.
- 2) We had a long discussion about Walmart, innovations at Walmart and technologies which Walmart was working in.

List of HR questions asked:

- 1) Difference between Hardwork and SmartWork
- 2) I was given 2 scenarios and asked how would I react to them.

Your suggestions for juniors in cracking this round:

- 1) Always give honest answers and be confident while you answer.

Tips on resume preparation:

- 1) Update Your Contact Details (Add LinkedIn, GeeksforGeeks, Leetcode, Github, Codechef, Codeforces links if available).
- 2) Present Your Education Properly.
- 3) Layout and Format is important.
- 4) List your experiences in reverse chronological format.
- 5) Add experiences that are relevant to the job description.
- 6) Customize your resume to each company and each job position.

Overall tips how to ace the placements:

- 1) Don't be nervous or stressed during interviews. Ask your friends or seniors to conduct mock interviews. This will help you gain confidence.
- 2) Always be ready with your real life stories for the soft skills that you have mentioned in your resume.
- 3) Be consistent in your preparations.
- 4) Take care of all the edge cases while writing code. You must know how to calculate time and space complexities.
