

Infinera Placement Interview Experience

Role: Software Developer

Number of Rounds: 4 offline

Job Location: Bengaluru

Job Description: Infinera India Private Limited is a leading provider of intelligent optical communication networks, where you'll work on cutting-edge technologies like photonic integrated circuits, software-defined networking, and machine learning to develop innovative solutions for high-performance networking, long-haul optical transport, and data center interconnects. You'll be involved in optimizing global data transfer, building scalable, high-capacity networks, and driving next-generation advancements using diverse platforms such as C/C++, FPGA, Python, and Linux. At Infinera, you'll contribute to creating sustainable, efficient communication systems that power the global internet and connect businesses worldwide.

1st Offline Round:

MCQs: Aptitude, OS, CN and OOPs

Difficulty Level: Easy

Coding Questions: 1 coding question was asked.

1. Given a string (sentence), return the word with second highest frequency. If there are multiple words with same frequency, return the lexicographically smaller string

Totally 18 candidates were selected for next round.

Technical Round 1 (45mins):

Difficulty Level: Easy

After the initial introduction, the interviewer asked me some questions about objectoriented programming (OOP) concepts, followed by a request to implement them using Java. We then discussed my internship experience and the work I had done there. To assess my C++ skills, I was given two straightforward coding questions: one to generate Fibonacci numbers and another to check if two strings

are anagrams. I had to write the code in notepad and explain my approach to the interviewer. We also had a brief discussion about the projects I had highlighted on my resume.

Technical Round 2 (1 hr):

Difficult Level: Medium

Computer Networks (CN):

The questions covered various protocols such as HTTP, FTP, and SFTP, as well as the differences between UDP and TCP protocols. We also discussed the OSI and TCP/IP network layers, and I was asked to explain how a message is transmitted using these models.

Operating Systems (OS):

The interviewer then focused on operating system concepts. We discussed virtual memory and its purpose, the difference between paging and segmentation, and deadlock prevention techniques. I was also asked about various CPU scheduling algorithms and some application-based questions, such as how memory can be efficiently utilized if two users are running the same web browser simultaneously. I explained the memory layout of a process, which includes code, text, stack, and heap segments. While I could describe the layout, I initially could not identify that the code and text segments could be shared between both instances of the web browser.

Logical Problem:

Finally, I was given a logical problem: how to compute the average of two integer numbers without causing overflow. I proposed several solutions, such as using $(a/2 + b/2)$, handling edge cases for overflow, and type casting the calculation to double and converting it back to integer. However, the expected solution was $a + (b - a) / 2$.

5 people were shortlisted after this round.

HR Round (10-15 minutes):

This HR round was mostly a formality. I was asked what I liked about the company where I interned and why I would prefer Infinera over that company. We also touched on some of the soft skills mentioned in my resume and had a casual conversation about the company's work and culture. The interviewer even inquired about my family background.

Finally, 5 people were selected.

My advice:

- Always prepare based on the company's focus areas. Knowing that the company emphasized operating systems (OS) and computer networks (CN), I tailored my preparation accordingly.
- Be honest in your answers because they will always cross question based on your answer.
- Communication is key—it is important to clearly share your thought process, whether or not you are confident in the answer.
- Since the interview was mostly theoretical, there were some concepts I was not fully familiar with, but instead of saying "I don't know," I made an effort to provide relevant answers based on my understanding.
