

CITICORP SERVICES INDIA PRIVATE LIMITED

CitiCorp Services India Private Limited deals with financial services. It provides investment and commercial banking services like consumer loans, trade advance etc.

Round 1: Online Assessment

This round consisted of MCQs and 2 coding questions. The MCQs included aptitude, logical, mathematical and verbal questions each in different sections. The verbal questions included comprehension questions. The comprehension questions will be based on a maximum of 2 passages. So we need not rush up as 4-5 questions may be based on a single passage. Aptitude questions were mostly based on the questions available in the Indiabix website. Each section has separate timers. Managing time will be a wise choice. The coding questions are in easy and medium level mostly. Practice in Leetcode website for coding.

Round 2: Technical , Managerial and HR Interview

The technical round is for about 25-30 minutes. If one has completed an internship, questions will be mostly based on the internship. The questions were as follows.

1. Tell me about yourself
2. Tell me about your internship
3. Questions on the technologies I explored during my internship
4. Data structure for frequency handling in a sorted way
5. You are working in a team and one of your higher official is doing something wrong. What would you do?
6. What do you consider important, Listening or Speaking?
7. How was your hostel life?
8. What would you consider as your achievement in your college?
9. Tell me about your college life which has a lot of diverse people in campus.
10. What would you do if we reject you in this process?

Be bold in answering these questions and have a clear layout of answers before answering questions like these. These questions can shape one's personality analysis.

Round 3: HR Interview

This round is for about 5-10 minutes. The following questions were asked.

1. Tell me about yourself ?
2. Why did you pick up computer science?
3. How does technology inspire you?
4. Do you have any questions for me?

For the last question, do some background research on the company if you are about to ask questions on the company's culture and stuff. Other questions can be about the learning process or you can pick up topics from the company's presentation.

Topics to be focused:

- Data Structures and Algorithms
- Prepare answers for common HR questions and 'about yourself' question prior.

Take Away:

Be clear with the concepts you speak. A bold and self-confident conversation will help. Think through the answers you provide. Start with a less optimized solution and build up as you go. Maintain a positive approach for most answers. Fear not if you don't know the answers. Try answering the questions positively.

Hope this helps.

Thank you and All the Best.
