

Aptiv Interview Experience

(Intern+FTE)

Role: Software Engineer

Pre-requisites – C/C++

Online Assessment (mix of MCQ & Subjective questions around technology, aptitude & basics of coding)-Online

The interview process consisted of three rounds(online)

Technical Interview

Techno Managerial Interview

HR Interview

(All the above 3 rounds are eliminatory)

About the Company

Aptiv is a global automotive technology company focused on building safer, greener, and more connected mobility solutions. It develops advanced software and hardware systems like autonomous driving tech, electrical architectures, and connected vehicle platforms. Headquartered in Switzerland, Aptiv operates in 49+ countries with major tech centers including India. The company aims for zero accidents and zero emissions, playing a key role in shaping future mobility.

140 members were shortlisted for Round1(Technical)

Meeting links were shared to respective mails and was conducted in TEAMS.

Round 1- Technical Interview (30 min)

- 1) Self-Introduction.
- 2) Tell about one of your best projects.
- 3) Questions about projects.

- 4) Networks-http vs https, how does DNS works, TCP and UDP and some other questions related to networks.
- 5) DBMS-Normalization, Primary Key, Foreign Key.
- 6) OS-Thread vs Process, Deadlock and its conditions, Deadlock Avoidance.
- 7) Some of the git commands were asked as I mentioned in my resume.
(eg. Fetch vs Pull)
- 8) He asked about my preferred domain to work in. I said AI, since it is an evolving field and my projects are aligned with it.
- 9) Cloud-based questions were asked as the interviewer works in the cloud domain. (I didn't know all the answers, so I shared what I knew and honestly said that I'm not aware of some, but expressed my interest in learning more about them)
- 10) Asked about my responsibilities as I mentioned in my resume.
- 11) Any questions for him.

Round 2- Techno Managerial Interview (30 min)

(Around 45 members attended this interview)

The interviewer asked about the project I am going to do in my final semester-what algorithms I am going to use, how I approach the problem, and how I am going to implement it. He also asked which programming language I used to code and how I would rate my skills in those languages. There were some situational questions too, like how I would handle a team if other members were not working, or how I would deal with a new algorithm that no one knew. He asked about the IDE I use for Python and also asked about my extracurricular activities, responsibilities, and certifications. And asked any questions for him.

In both rounds of my interview, it was fairly easy. Some panelists asked basic coding questions and about Aptiv protocols, along with other company-related topics.

Overall, be confident in your answers, even if they are not completely correct. Share your thoughts honestly if you are unsure.

Tip: Answer questions practically, not just theoretically. Use examples of your work to explain your points.

Round 3- HR Interview (20 min)

(Around 30 members attended this interview)

The interviewer was very relaxed. He asked me to tell my college journey from the first year to the final year as a story. He also asked where I come from and the challenges I faced. He asked about my area of interest and what inspired me from the company's presentation.

Then he asked how others would describe me. I said they would call me a good motivator. After that, he gave me a situation: he said he got rejected by 5 companies, has no more on-campus placements, and is feeling depressed. He asked to motivate him. I motivated him by saying that everything will happen at the right time, that one should prepare persistently and give their full effort, and the rest will fall into place. The discussion went around for about 5 minutes. He was very curious and listened to me carefully. Finally, he asked if I had any questions for him.

25 members got selected finally including me.

8 members from CS, 7 from IT, 10 from ECE.

Key Takeaways:

- Focus on DBMS, Computer Networks, OS (mainly), and OOPS.
- Be thorough about everything you mention, especially the projects.
- I followed the *TakeUForward* YouTube channel and regularly solved problems on LeetCode or GeeksforGeeks.
- Focus on patterns, not quantity: Understand problem-solving patterns instead of just solving a large number of problems.
- Research about the company and its domain before the interview.

It was my second interview, and I felt really happy when I got selected! The interview process spanned two days, but I was lucky to complete all my rounds on the first day itself. Some candidates had to wait for the second round results until the next day. I was also the first one from the CS department to move on to the HR interview. The final results were announced after a week, right after the Pooja holidays.

During placement drive, I noticed that many people attend multiple interviews and feel upset if they aren't selected. It can be disappointing, but I believe whatever is meant for you will come at the right time. There's no use in feeling low-talk to your friends when you're down, and take care of your health, and go out to get some fresh air. With consistent preparation, the right opportunity will come. Everyone has talent, and you'll get a chance to showcase yours!

All the Best!!!

Dhivya S, CEG CSE'26
