

WELLS FARGO INTERVIEW EXPERIENCE (INTERNSHIP)

About The Company:

Wells Fargo & Company is an American multinational financial services company with a significant global presence. The company operates in 35 countries and serves over 70 million customers worldwide. It is a systemically important financial institution according to the Financial Stability Board, and is considered one of the "Big Four Banks" in the United States, alongside JPMorgan Chase, Bank of America, and Citigroup.

Read This First:

Wells Fargo is an easier company to crack, relatively. So, even if you're not so good at solving problems, you can crack it if you try. Don't worry that you won't get shortlisted or that you won't get a chance, as many people are better than you. Prepare well, do your best, and you'll surely get shortlisted. Okay, I think that's enough motivation. Let's get into the nitty-gritty details.

All Different Rounds:

1. Online Test (Offline)
2. Technical Interview (Offline)
3. Technical + HR Interview (Offline)
4. HR Interview (Offline)

Online Test:

I prepared by solving some of the previous year's questions from Wells Fargo after reading the documents of our seniors. I also studied a small amount of aptitude related to interests, stocks, and prices, which was totally useless. But do learn basic terms in stocks.

This round was conducted on the Aspiring Minds (SHL) platform. The round consisted of three sections, namely *verbal aptitude*, *business aptitude*, and *coding*. Both aptitude sections had MCQs that had to be answered compulsorily, and free navigation was prohibited. Everyone got different sets of questions for the coding section. Most of the questions will be some commonly asked questions, but it will be written in the form of a scenario or a paragraph. Be prepared to quickly grasp the constraints of the question.

Verbal Aptitude (12 Questions in 15 Minutes):

It had simple questions like correcting the error in the sentence, reading comprehension, and filling in the blanks with appropriate words. This section is a piece of cake if you're good at English grammar, so try to score more in this section.

Business Aptitude (14 Questions in 25 Minutes):

Oh boy, this section was tough. I was given a table, a graph, or a chart related to finance with an explanation about it. I had to analyse it and answer the different questions that were asked related to that. It may seem easy, but it was tough. This section will actually decide whether you'll get shortlisted or not. So, try to solve similar questions like that.

Coding Section-1 (2 Questions in 40 Minutes):

As I said, you can easily solve these two questions, or at least come up with a solution for them. It will contain easy-to-moderate-level questions, so knowing basic techniques is good enough to solve these rounds.

Question 1:

Given an array, return the number of perfect squares in it.

Constraints:

$1 \leq \text{arr.length} \leq 10^6$

$1 \leq \text{arr}[i] \leq 10^6$

Example:

Input: arr = [37, 83, 64, 49, 12, 10, 3]

Output: 2

Explanation: 64 & 49 are the only perfect squares. So, the count is 2.

Very easy, isn't it? I was able to code it up in few minutes and I passed 12/12 test cases.

Question 2:

You are given an integer "*totalMembers*", a 2D array called "*swapMembers*" and another integer "*posMember*". Assume that there is queue containing "*totalMembers*" (like 1 to N in increasing order), you have to perform all the swap operations in "*swapMembers*" array and return the member(number) who is at the "*posMember*"(kth position).

There was one problem with this question. In the question, they asked to swap the members, but in the output explanation they reversed the array from one position to another. (So, this question was not really explained clearly.)

Constraints:

$1 \leq \text{posMember} \leq \text{totalMembers} \leq 10^9$

$1 \leq \text{swapMembers.length} \leq 10^6$

$\text{swapMembers}[i].\text{length} = 2$

Example:

Input: totalMembers: 10

swapMembers: [[5, 10], [2, 5]]

posMember = 1

Output: 1

Explanation: The initial queue of members: [1, 2, 3, 4, 5, 6, 7, 8, 9, 10]

After 1st swap (5 to 10): [1, 2, 3, 4, 10, 9, 8, 7, 6, 5]

After 2nd swap (2 to 5): [1, 10, 4, 3, 2, 9, 8, 7, 6, 5]

Now the member at position-1 (posMember) is 1

As you can see in the output explanation, they reversed the array from one position to another instead of swapping the two positions alone. I coded a brute force approach by reversing the array, and it passed 10 / 12 test cases. When I tried just swapping the positions, only 8 / 12 test cases passed. Then, I submitted the first approach and went ahead, as I couldn't think of any other approach.

Coding Section-2 (1 Question in 10 Minutes):

A detailed explanation about the [Seven Bridges of Königsberg](#) problem was given. The task was to determine, given a starting vertex V, a list of edges E, and a visited array, whether the problem is solvable (returning true or false). I didn't fully understand the question, so I submitted without writing any solution. I believe the question was related to detecting a Eulerian cycle.

Interview Preparation:

At 11:30 pm, they suddenly announced the results, (which was very quick). 22 people were shortlisted for the interview, and I was one of them.

I quickly revised all the important DBMS concepts since they're crucial for a Fintech company. Also, I went over some last-minute OS and OOPS interview questions. Yeah, that was all the preparation I did. Additionally, I prepared all the necessary documents required for the interview since we had to go to the MIT campus for the interview.

My advice is to study OS, DSA, OOP, and DBMS concepts in advance and be well-prepared. Don't wait until the last minute, like I did. Even if you think you might not be selected, start preparing right after the online test—it could be beneficial if you do get selected.

Technical Interview (30 Minutes):

A lot of questions on different topics were asked of me in this round. They are as follows:

- ❖ First, the interviewer asked me to introduce myself and then inquired about the subjects in my college syllabus.
- ❖ Next, he asked me what I knew about the company.
- ❖ After that, he provided several subjects to choose from and asked which one I was most well-versed in. Instead of selecting from the given options, I mentioned "Web Development." I recommend not making this mistake.
- ❖ He then asked me to explain the web development projects I mentioned in my resume, as well as the achievements I listed in my resume.
- ❖ He then moved on to DBMS and asked me about the different types of languages used in DBMS. I mentioned DML and DDL, but when he asked about DCL, I told him that I wasn't very familiar with it.
- ❖ After that, he asked me about normalization and then asked me to write a simple SQL query to check for duplicate names in a table.
- ❖ He then moved on to Data Structures and Algorithms (DSA) and asked me about the different types of data structures, the types of linked lists, and the various operations performed on a stack.
- ❖ He then asked if I was proficient in Python, to which I replied no.
- ❖ After that, he asked me what structured programming is, followed by questions on how to write code effectively and the clean code principles that should be followed.
- ❖ Then he moved on to OOPS and asked me what the important concepts were in OOPS. Then he told me to explain Encapsulation and Inheritance.
- ❖ He then asked me about the types of inheritance. I replied that I didn't know, even when he mentioned one or two types to help me answer, I still admitted that I wasn't very familiar with it.
- ❖ He then asked me about error handling and which statements are used for it.
- ❖ After that, he asked me about the Software Development Life Cycle (SDLC) and the Agile approach.
- ❖ He then gave me a problem and told me to write a code to solve it, The question was to [Remove Duplicates from a Sorted Array](#). As I've already solved it, I gave an optimal two-pointer solution. Then asked some follow up questions, and I answered them well.
- ❖ Finally, he asked if I had any questions for him. I inquired about his experience and challenges at Wells Fargo, and then asked for feedback on areas where I could improve.

I provided detailed answers to all the questions, but the interviewer advised me to be more concise. Therefore, I recommend giving to-the-point answers rather than lengthy explanations. Also, if you're unsure about something, it's better to admit it rather than giving confusing or incorrect answers, as it could create a negative impression.

Technical + HR Round (15 Minutes):

Shortly after the first round, I was invited to attend the next interview round. This round was much shorter compared to the first. The questions asked in this round are as follows:

- ❖ First, the interviewer asked me to introduce myself and then immediately began asking questions based on my resume.
- ❖ Then he asked me about all my projects and my achievements, and I gave a detailed explanation about all those.
- ❖ He then asked me about all my projects and achievements, and I provided detailed explanations for each.
- ❖ After that, he asked which programming language I use most often and why I chose to learn it. I responded that I use Java and explained its legacy as the reason for my choice.
- ❖ He then asked me about abstraction and requested a real-world application example where abstraction is used.
- ❖ After that, he asked where I see myself in the future and about my passions.
- ❖ Finally, he asked if I had any questions for him. I inquired about the work-life balance at Wells Fargo and what it's like to work at the company.

My resume was very helpful in clearing this round. If you're unsure about an answer to an HR question, it might be beneficial to come up with a thoughtful response on the spot rather than admitting you don't know.

HR Round (5 Minutes):

Immediately after completing the second round, I was called for the HR round. This round went by in a flash (2 minutes for me) with very few questions. They are as follows:

First, the interviewer asked me to introduce myself.

- ❖ She then inquired about why I chose Wells Fargo.
- ❖ After that, she asked if I had to learn anything on my own and whether I faced any difficulties.
- ❖ She concluded by saying that I performed well in the interview and that they would announce the results later.

Overall, the interview experience was positive and went smoothly. Despite being nervous initially, my anxiety eased after the first exchange of conversation.

Results:

Later that night, they announced the results. 12 people were selected for the summer internship, and I was very happy to be one of them (ゝ • ˘ - ˘) ✧.

All the best everyone!
