

Appian Interview Experience

Appian is a **low-code automation platform** that helps organizations build business applications quickly and efficiently. It combines **process automation**, **AI**, **data integration**, and **workflow management** into a single unified platform.

- **Founded:** 1999, headquartered in Virginia, USA.
- **Core Feature:** Drag-and-drop interface to design apps with minimal hand-coding.
- **Use Cases:** Business process management (BPM), case management, workflow automation.
- **Target Users:** Enterprises looking to digitize and automate complex processes.

Appian is widely used in industries like **finance**, **healthcare**, **government**, and **manufacturing** to streamline operations, improve compliance, and reduce time to market.

Role : Software Engineer Intern (2 months)

No of Rounds : 4

Round 1 : Online Technical Assessment (90 minutes)

Platform : Glider.ai

No of Questions : 3

Question 1 : 🌐 Merge Intervals - LeetCode

56. Merge Intervals

Medium

Topics

Companies

Given an array of `intervals` where `intervals[i] = [starti, endi]`, merge all overlapping intervals, and return *an array of the non-overlapping intervals that cover all the intervals in the input.*

Question 2 : 🌐 Find First and Last Position of Element in Sorted Array - LeetCode

34. Find First and Last Position of Element in Sorted Array

Medium

Topics

Companies

Given an array of integers `nums` sorted in non-decreasing order, find the starting and ending position of a given `target` value.

If `target` is not found in the array, return `[-1, -1]`.

You must write an algorithm with $O(\log n)$ runtime complexity.

Question 3 : [🌐 Missing And Repeating | Practice | GeeksforGeeks](#)

Missing And Repeating

Difficulty: Easy

Accuracy: 24.83%

Submissions: 623K+

Points: 2

Average Time: 30m

Given an unsorted array `arr[]` of size `n`, containing elements from the range `1` to `n`, it is known that one number in this range is **missing**, and another number **occurs twice** in the array, find both the **duplicate** number and the **missing** number.

The extra part in the question was that the numbers from 1 to n were split into m disjoint teams. The teams matrix was given. The missing and duplicate numbers will be in any one of the team, if so then return “**Valid Team**”. If the missing number and duplicate numbers were in different teams, then return “**Not a Valid Team**”. If they were in Multiple teams return “**Multiple Teams**”.

They expected to return the values in a structure (in cpp) .

```
struct Result {  
    int missing;  
    int duplicate;  
    string team;
```

}

Based on the performance , 42 students from CEG and MIT were shortlisted for the further rounds. The further rounds were in person rounds at CUIC.

Round 2 : Technical Round (30 - 35 minutes)

In this round, the interviewer asked me for my **resume** and asked me to tell me about the **projects** that I had done. I had mentioned two projects on my resume. I explained him about it. He asked why I did choose the specific tech stack and the pros and cons of it. I also explained about the **difficulties** that I faced and the **lessons** I learned from them.

He asked me about my favorite programming language and why it was my favorite. If I were to convince my junior or friend to learn that programming language, how would I do so.

If me and my team-mate have an argument/dissent about implementing a particular feature, how would I **resolve** it. I answered this based on my experience working in team - projects.

I mentioned I had used Firebase for my project. He said me that he is a fan of Firebase and asked me to tell more about it. Then, he drew three RDBMS Tables in a paper and asked me if i were to model this is in a NoSQL Database Schema, how would I do so.

Finally , he asked me if there was any questions to him from me. I asked him a few questions about Appian's products and work-style.

Students shortlisted moved to the next round.

Round 3 : Techno-cum-Behavioural Round (10 - 15 minutes)

In this round, the interviewer asked me to explain about one **challenging project**, that I had done. He inquired me about my current internship and how did I get selected for it.

He also asked me to ask questions to him.

Student shortlisted moved to the next round.

Round 4 : HR Round (5 minutes)

The interviewer asked about my native place, my CGPA. He asked me about my favorite programming language and the books / youtube channels I referred and he noted them down.

He asked me about the LLM's that I use and the name of the interviewer who took the technical interview for me.

He also asked me to ask questions to him.

The results were announced in the night and 12 of us from CEG and MIT got selected as Software Engineer Interns at Appian.

Key Takeaways :

Round 1 :

- The questions were in the range easy - medium **leetcode / gfg** style problems.
- Write proper **clean code** and give meaningful variable names.
- Array based questions were most common.
- Try to give optimised approach.

Resources :

- [takeuforward](#) - Best Coding Tutorials for Free

Round 2 / 3 / 4:

- Your Resume is the key to your success. **Never include anything in the resume that you don't know.**
- Be strong and clear with what is in your resume.
- Include at least **one strong project** that you did, and structure the interview around it.
- DSA questions can be expected, but since I had a strong project , the interviewer did not ask me them. Anyway, be prepared with topics like **array, strings, linked lists**.
- Be confident with your answers.
- **Research about the company a little**, and ask questions to the interviewer that are meaningful and impactful.
- Listen to the **Pre-Placement Talk** to know about the role you are applying for and what they expect from you.
- **CGPA** is one of the shortlisting criteria for Appian , so try to maintain a CGPA of atleast 8.5.

All the best!
