

BNY SUMMER INTERNSHIP INTERVIEW EXPERIENCE

Nanda Kumar
2022503558
CT batch of 2026, MIT

No of Rounds: 3 (Online Test + Technical interview + Technical & HR interview)
Stipend: 75,000 INR per month
Duration of internship: 8-10 weeks

Round 1: Online Assesment

There were 4 questions totally. 1 easy, 2 medium and 1 hard. 24 students from CEG and MIT students were selected for the Technical round.

Round 2 : Technical Round

The Technical round primarily focused on networking, databases, and computer fundamentals, along with some personal discussion. The interviewer began with general questions about my college whether MIT comes under Anna University, where it's located, and how many companies had visited the campus.

The discussion became conversational we spoke for nearly 15 minutes about football, one of my interests, and about movies with good direction and cinematography. The interviewer and I connected well over that.

Then, we moved on to core questions in **Computer Networks** such as:

- How routing works and what the Internet is.
- What happens on the backend when a query is typed into Google.
- How local and global area networks are connected using ISPs and bridges.

In **DBMS**, I was asked to write a query using UNION. I admitted I wasn't sure and asked the interviewer to explain it which he did. He asked me few questions on Big data as he was working on that currently. He asked me few questions on API, though I didn't know the answer at first I was sure that I would be able to deduce it, so I asked the interviewer some time to think and answered it. Throughout the interview, I maintained openness to learning even when my answers were incorrect, I was eager to understand the correct ones. The interviewer appreciated that attitude.

In **DSA**, I was asked to write a program to reverse a string in any language on paper (I used C, though the interviewer was familiar with Python).

Other questions included real-life examples of **queues and stacks**. He later mentioned that my **basics were strong and communication was very good**, and that I had great learning potential. Half of the interview was personal and the remaining half was technical.

This round lasted over 40 minutes and 10 of us were selected to the second round.

Round 3: HR Round

In the HR round, I was asked to explain my **projects** in detail. I described both my software and hardware based projects thoroughly, which impressed the interviewer. Many questions were asked over my projects and I answered most of it. When asked why I worked on a hardware oriented project while others focused on web development, I explained how hardware projects also help computer science students expand their technical understanding and my interest over hardware based projects.

He then asked me what an Operating System is and why we need it. My explanation caught his attention, and he even introduced me to the head of the Pershing branch at BNY to appreciate the way I had explained it. That moment emphasized how **clarity in basics can make a strong impact**.

Finally, among the few behavioural questions the interviewer asked “**Why BNY?**”, I connected my interest in **finance** with the company’s domain. I shared my personal experience with hedge funds, forex markets, stocks, trading firms, clearance, investments, bonds, futures and commodities even mentioning that I had done a few trades myself. He encouraged me to add that experience to my resume, saying, “You know what kind of company we are right ,why don’t you include this in your resume. This gives you a strong edge.”

Finally 6 of us were offered internships.

Key takeaway's :

- Be thorough with your resume and projects. Don't mention anything you don't know in resume.
- Be strong with your basic DSA, DBMS, OOPS and OS.
- Stay calm and confident even when you don't know something. The way you handle unknown questions matters more than having every answer right. It's okay to ask for some time to think or say you don't know. Show them you're willing to learn.
- Learn about the company and try to speak if you have any personal interests over the company's domain (Finance).
- Try to connect with the interviewer, both professionally and personally. Try to have a conversation with them instead of an interview.

ALL THE BEST
