CONTACT: 7418356711

Batch: 2022 – 2026

Round 1: Online Assessment Test

The test was conducted on an online platform Glider AI platform. There were three coding questions.

Question 1: [Josephus Problem](#)

Given start person and k , you have to print the order in which people die. Refer to the [geeksforgeeks](#) page.

Question 2: Make Queue

Inputs:

You are given a group name with persons in each group. You are also given an array of strings with name of persons standing in a line.

Output:

You should return an array of strings (name of persons). Array is constructed using following rules:

- i) If a person belonging to a group is standing in the line, then all other persons in that line belonging to the same group move behind him. Basically just making the people of same group adjacent to each other in the order in which the input line is.
- ii) After arranging using rule i), if you find all the persons belonging to a group is present then you have to replace all the person's name with their group.

Question 3:

Given breadcrumbs for a website as an array of array of strings, Make a tree out of it.

Sample input:

```
arr = [['Main', 'Dashboard', 'Settings'], ['Main', 'Profile', 'Uploads'], ['Main', 'Dashboard', 'Products'], ['Main', 'Profile', 'Remove'], ['Main', 'Manager', 'Work'], ['Main', 'Manager', 'Review']]
```

make a tree out of it by linking as follows:

Main

- Dashboard
 - Setting
 - Products
- Profile
 - Uploads
 - Remove
- Manager
 - Work
 - Review

I was able to solve Question 2 and Question 3 (partial). I along with 21 candidates was shortlisted for next round

Interview Phase

The interview was conducted in CUIC. It consist of 3 rounds.

Round1 (Technical – 25 mins):

The interview starts with my self intro. Then he asked me how I would choose candidates, I were in the role of selecting candidates. I say, "I would check the candidates Computer fundamentals and his aptitude along with problem solving abilities". Then he tested me on OOPS, DBMS and web technology.

He asks me to find the object with less weight out of 8 similar looking objects but to use the balance weighing scale only twice.

He then asked me Two sum problem (first problem of leetcode)

He also tested my sorting algorithm techniques

Round 2 (More like a HR – 10 mins):

This interview is more like a HR round. Only technical question asked was the time complexity of Quick sort. He also questioned me whether I would do Masters or not.

Round 3 (HR – 5mins):

This round lasted for less than 7 minutes. He asked me why he should hire me. Then some questions on my family background was put up. Finally he asked questions on my project in the resume.

In the eve results were announced. I was one of the 5 selected candidates.

Tips:

Learn basics of OOPS and your 4th semester DBMS concepts

Know whatever in your resume

General Tips:

Be Confident

Be Honest with yourself

Don't think about results, keep working on it...
