

BATCH: 2019-2013

FOR: Internship

NAME OF THE COMPANY: Wells Fargo International Solutions Private Limited,
Bangalore

ABOUT:

Wells Fargo & Company is an American multinational financial services company. They provide banking, investment and mortgage products and services, as well as consumer and commercial finance through more than 7,200 locations, more than 13,000 ATMs, the internet (wellsfargo.com) and mobile banking.

NUMBER OF ROUNDS: 4

1. Online Test
2. Interview Round 1
3. Interview Round 2 (Senior Manager Round)
4. HR Round

ONLINE TEST:

This round consisted of three sections, conducted on the AMCAT platform. First section was verbal aptitude. Questions like choose the correct meaning, fill in the blank with appropriate words were asked. Second section was called business aptitude. Questions were largely based on graph interpretations(pie charts, bar graphs, line graphs) and also data interpretation, prerequisites regarding any business terms not required. Third section consisted of two coding questions. Everyone got different sets of questions for this section. Mostly the questions will be some commonly asked questions, but it will be written in the form of a scenario, a paragraph per se. Do be prepared to quickly grasp the constraints of the question.

The questions that I got -

1. [Generate binary string](#)
2. A variation of [Find Minimum sum of product of two arrays](#) where a 2D matrix was given and I was required to find the minimum sum of product of all possible pairs of arrays.

A total of 30 students were shortlisted from both CSE and IT.

INTERVIEW ROUND 1 (1h)

The interview was conducted on Zoom. The interviewer first asked to introduce myself. He then asked me to share my screen and open notepad or any IDE. He then gave me a coding problem ([Number of overtakes | Practice Problems](#)). I had suggested an $O(n^2)$ solution and coded it. He asked me to optimize it, but I wasn't able to. (PS - Do not ever give up and say "I don't know" to any answer, especially coding questions. Try to approach it. The interviewer is mostly focussed on your approach rather than the final solution).

He then proceeded to ask me [Find missing element in a sorted array of consecutive numbers](#). I began to suggest an $O(n)$ solution to which he said he wanted the optimized solution instead. I explained the Binary Search method. I wasn't asked to code the final solution. The interviewer then ended the interview by asking if I have any questions (Always prepare some questions and keep. It shows that you are interested in the position that you're applying for). I asked him who in the organization would be responsible for any security breaches that could happen.

INTERVIEW ROUND 2 (40 mins)

I thought I wasn't shortlisted for the second round, as everyone I had asked had already finished their second round. But I had received a call, around two hours after the first round, asking me to attend the second round immediately.

The second round was also conducted on Zoom. I was greeted by the Senior Manager. She first asked me to introduce myself. Then I was asked to say something about myself that is not in my resume. I had told her about my strengths and weaknesses.

She then asked me about my hobbies. Some questions regarding a previous internship I had done (PS: Be mindful of what you say in interviews as questions will often arise from it.) I had mentioned something about the HTTP protocol. She asked me what it is, and what other protocols I know.

I was then asked to write a function to check if a given string is a palindrome ([Palindrome String](#)). Then she asked me if I know radix sort, I said no (Do not lie in interviews. If you don't know something, politely admit.) She asked me to explain the working of merge sort ([Merge Sort](#)). I wasn't required to code it.

The interview ended with her asking if I had any questions. I asked about how a day would look like for an intern at Wells Fargo.

HR ROUND (5 mins)

This round was a telephonic round. He asked me to first introduce myself. Then he asked about my parents, where they're from. He asked about my previous internship too. Then the interview ended with him asking if I was willing to relocate.

TOPICS TO BE FOCUSED:

- The usual important topics (DSA, DBMS, OOPS, OS) (Googling "Interview questions on ____" gives a tonne of useful, consolidated resources that are interview focussed)
- Ensure that you can provide an explanation for every single topic written in your resume.
- Archives of the particular company on GFG give good insight into the general difficulty level of questions asked, and also the number of rounds for the particular company.

KEY TAKEAWAYS:

- Never panic if you don't answer a couple of questions in the interview. The interviewer is merely seeing how you would act in different situations.
- Have some interesting hobbies. (I had mentioned crochet, which was an immediate hit with the interviewer in the second round)
- Always try to answer the questions asked. Instead of saying "I don't know", you can say something like "I don't know, but from whatever knowledge I have, I am guessing ...".
- Prepare an introduction and practice it. Just winging it will never workout. It will merely make a person look shabby, awkward and unprepared.
- Prepare answers for other non-tech questions also (What are your strengths/weaknesses, Why do you want this internship, etc)
- Try to have a good rapport with the interviewer. Show that you're excited to be there, because they're also humans like us.

Wishing you all the very best!
