

CHRONUS

Round 1:

- 2 Coding questions of moderate difficulty hosted on hackerearth. One was on binary search similar to the famous <https://www.spoj.com/problems/AGGRCOW/> and the other was on strings.

Round 2:

- Platform : Hackerrank codepair
- <https://www.geeksforgeeks.org/majority-element/> (Moore's Voting Algo)
- And questions related to my internship experience in Samsung Semiconductor.
- A few standard puzzles. (Ample time was given)

Round 3:

- A variation of <https://www.geeksforgeeks.org/count-ways-reach-nth-stair/>
- Few HR questions
- A wonderful question that needed spot thinking based on random number generation.
- Couple of puzzles and briefly touched on rest apis

Round 4:

- Completely friendly HR questions

My piece of advice:

- Practice regularly on leetcode and hackerrank or even gfg.
- Complete <https://www.geeksforgeeks.org/must-do-coding-questions-for-companies-like-amazon-microsoft-adobe/>
-
- Concentrate on OS and DBMS too. (You will have to know the code for thread creation in a language of your choice and code for JDBC connectivity. Boomer interviewers ask stupid questions like these)
- Develop an intuition for recursion
- Dynamic programming might be a bit counterintuitive but you will love it once you get a knack of it. Start with a recursive solution, then formulate top down dp approach then proceed to bottom up dp. (My way of doing dp. Not sure if it's perfect).
- Have 2-3 solid projects (Atleast)
- Do not over-familiarize yourself with standard problems. Try competitive programming. Try doing long challenges on codechef.

Btw, I'm Vinoth

Contact me on whatsapp @9629160571 (Anytime bro!)

All the best ! Chill out and enjoy the preparation!
