

My SAP Labs Interview Experience ★

Total Rounds: 5

Date: 18th August 2025

Hi everyone! I wanted to share my SAP Labs interview journey because when I was preparing, I used to read these kinds of experiences and they helped me a lot. So, here's my detailed story — from the online test to the HR round. Hopefully, it gives you some idea of what to expect and how to prepare. 😊

📖 Round 1: Online Assessment (60 mins)

The very first hurdle was the **online coding test**, which was conducted in a virtual mode at CUIC. We had to solve **two coding questions** in one hour.

💎 Question 1: Bank Transfers Simulation

We were given:

- A string R and an array V .
- If $R[i] = 'A'$, transfer $V[i]$ amount from Bank A to Bank B.
- If $R[i] = 'B'$, transfer $V[i]$ amount from Bank B to Bank A.

The task was to find the **final balance of both banks** after all transactions.

Constraints were huge (N up to 100,000), so efficiency was key.

💎 Question 2: Balancing the Board

We had two strings ($row1, row2$) representing a board:

- Cells contained 'R', 'W', or '?'.
• '?' could be replaced with 'R' or 'W'.

We had to make the board “balanced” with the **minimum replacements**. If impossible, return "not possible", else return the count of replacements.

This round tested both **logic** and **optimization skills**. After completing it, I felt quite confident and fortunately, I cleared it.

⚙️ Round 2: Technical Interview – 1

From hundreds of students, **90 were shortlisted**.

This round started casually with:

- **Self-introduction**
- A few questions about my **internship experience**

After this warm-up, we quickly moved to problem-solving.

📄 SQL Questions I faced:

1. From the `Employees` table, find the **top-most manager** of a given employee.
2. From `Orders` and `Restaurants` tables, find the **Top 5 restaurants** with the maximum orders in the **last 7 days**.

This round was a mix of SQL + clarity of thought. I cleared it and was super excited to move forward.

⚡ Round 3: Technical Interview – 2

Now things got serious. Out of 90, only **30 candidates moved ahead**, and this round was the most grilling one.

I was interviewed by **two experienced professionals** who really tested me. It started with another introduction (yes, again 😊), and then they literally went **line by line through my resume**.

Here's what happened:

- I had to **explain my projects** in detail — not just what I built, but also **how** I built them and **why** I chose certain approaches.
- Then came the **conceptual questions**:
 - Difference between a **process** and a **task**.
 - Internal working of **compiler vs interpreter**.
- One **coding task**: Implement a **basic sorting algorithm** on the spot.
- Some deep **Operating Systems concepts**: mutex, critical section, producer-consumer problem — and I had to explain them with **real-life examples** (for example, producer-consumer like “chef cooking food and waiter serving customers”).

This round went on for almost **1 hour 30 minutes**. Honestly, it was tough, but I stayed calm and answered with examples whenever possible. Thankfully, I got through! 🙌

📁 Round 4: Managerial Round

Now only **15 candidates were left**. This round was more about my **personality and behavior** rather than coding.

The panel was quite friendly (and luckily, one of them had already interviewed me in a previous round, so I felt comfortable).

They asked:

- Why do you want to join **SAP**?
- Where do you see yourself in **5 years**?
- What are your **strengths and weaknesses**?
- How are you working on improving your weaknesses?

This was more like a **conversation** than an interview. It went on for about 40 minutes and I came out smiling.

👥 Round 5: HR Round

Finally, **13 candidates were shortlisted** for this stage.

This was the most **relaxed and informal round**. It started with some **storytelling** questions like:

- How did I choose MIT?
- My college journey so far.

After that, the HR explained the **compensation details**, the **internship structure**, and the **job location**. I also got a chance to ask my own questions about the role and internship.

It ended smoothly, and after about 15 minutes of waiting... the results were out!

🎉 Out of 13, **10 were selected**. I was thrilled to be the **4th person on the list**.

💡 Suggestions

- **Resume is everything** – Every line will be questioned. Be **honest** and **well-prepared**. Don't put something unless you are ready to defend it.
 - **Simple questions matter** – They're not checking if you know "rocket science". They want to see if you understand basics and can explain them **clearly**.
 - **Use real-life examples** – Whenever possible, connect your answers to real-world scenarios. It shows you really understand the concept.
 - **Communication is key** – Speak confidently but don't bluff. If you don't know, it's okay to admit and move on.
-

✈️ My Details

Name: Anselm Flavian P

Roll No: 2022506101

Batch: 2026

Department: Information Technology

College: Madras Institute of Technology (Anna University)

LinkedIn: [linkedin.com/in/anselm1305](https://www.linkedin.com/in/anselm1305)

✨ That was my SAP Labs journey! If this experience helps you and you get placed at SAP, do remember to thank me later 😊
