

NETRADYNE INTERVIEW EXPERIENCE 2024

ABOUT THE COMPANY:

Since its inception in 2015, **Netradyne** has pioneered fleet safety with cutting-edge A.I. and data solutions. With over 275 patents, Netradyne combines AI and video to revolutionize vehicle telematics by detecting and analyzing driving events. They empower drivers through positive reinforcement, enhancing safety and performance. Their Driver•i solution reduces accidents, improves safety scores, and lowers insurance costs, driving fleet success. Netradyne is transforming the future of fleet safety and performance.

Total Rounds:

1. Online Assessment
2. Technical Interview -1
3. Technical Interview -2
4. Technical Interview -3(Based on Performance)[I did not have this round]
5. HR interview

1. Online Assessment (30th October)[CUIC lab]:

- **Aptitude:** Standard level of difficulty.
- **Coding Questions:** There were three questions, varying from moderate to high difficulty. While none were standard questions, they were quite understandable. I managed to solve one question fully and partially address the other two.

My Department IV was on the 31st. I thought it would be great if I got selected and could go for the IV. Hopefully, I got selected for the next round.

2. Technical Interview Round 1 (31st October):

- **Introduction:** Standard introductory questions.
- **Project Discussion:** Detailed discussion on all my projects, with a focus on my network and machine learning project.
- **Debugging:** Was given a code snippet with an infinite loop and asked to debug it. I did it easily.
- **SQL Question:** A medium difficulty question that I wasn't able to answer correctly.
- **Coding:** A question related to my machine learning project.

Despite the SQL question and not providing an optimized solution to the coding question initially, the interviewer was trying to guide me toward a better solution. With the guidance of the interviewer, I provided an optimal solution.

I was not confident that I would be selected for the next round because I made a mistake in SQL and did not provide an optimized solution initially. But, I got selected.

3. Technical Interview Round 2:

- **Introduction:** Standard introductory questions.
- **DBMS Project:** Discussed my DBMS project, including the ER diagram, with in-depth questions.
- **Technical Questions:**
 - **Sorting Algorithms:** Discussed merge sort and its efficiency with time complexity comparisons. Asked to write down the merge sort code fully and explain it with an example. The interviewer seemed satisfied after my explanation.
 - **OOP Concepts:** Initially used standard examples but later provided a tailored example that satisfied the interviewer. When I first mentioned GFG examples, the interviewer noted, "The earlier person said the same thing!" I laughed and said it is a standard example and provided a real-life example. He looks impressed after providing a real life example.
- **System Design:** Initially asked to design the system for Book My Show, which was later simplified to just the structure and functioning of the system.
 - Storing user data in Book My Show.
 - Asked to Draw ER diagram for book my show with required entities and Asked questions about primary key, super key etc...
 - How do you Differentiate between booked and non-booked seats in Book My Show?.
 - The interviewer asked many questions related to data handling and data flow, and I was able to provide satisfactory answers.
- **Time Complexity and Space Complexity Questions:** These were kind of tricky, but the interviewer guided and involved me well. Asked, "When does $O(x)$ complexity exceed $o(y)$ where x & y are some values?".

At the end of this round, the interviewer wished me well and said they would meet me again, which gave me a positive feeling about my performance.

I was sure that I would be selected for the next round, but some of the candidates had one more technical round and were rejected. So, I was slightly scared. But I got selected directly to the HR round.

4. HR Round:

- **Basic HR Questions:** Covered typical HR topics.

- **Company Roles:** Explained various roles in the company and based on my interview performance, suggested the Biz System role. Initially unsure about this role, I was provided with a real-life example that helped me understand and accept the Biz System role.

Overall, the process was intense but engaging, and I'm optimistic about the outcome based on the feedback I received. The experience was both challenging and rewarding, and I look forward to the next steps.

Verdict : Selected

P.S : Throughout the interview, I balanced my stress with the thought of the departmental IV on the same day. I joked to myself, "If I don't pass the round, at least I can pack my dress for IV and still be ahead!" My stress-free attitude in Technical Interview Round 2 helped me pass it. Don't lose hope ,it's my 10th interview after getting clearing the online round. All the best for your interviews.
