

About the Company

Accenture is a service based company.

It hires students from all departments so it's a good opportunity for non-circuit branch students also.

About the role

Usually service based companies hire for a flexible role. Officially the role name is Application Engineer but my responsibilities and Tech stack is not predetermined.

Preparation Strategy

This is a low-tier company and their interview syllabus is wide but not deep.(covers a lot of topics but not in depth).

If you are already from CS or IT dept, only the basic course subjects like (OOPS,DBMS,OS,Computer Networks) are enough.

General aptitude preparation is required as they have a separate section for aptitude in the online assessment (use IndiaBIX).

For coding rounds it's usually only strings , loops and hashing topics.[Easy to medium].

Placement Drive experience (online test, GD, technical and HR interviews)

200+ students participated initially but only 7 were selected.

Round1: Cognitive and Technical Assessment for 90 mins

Questions asked : Aptitude, Predict the output for given code , OOPS , DBMS ,OS , Computer Network(IP address), MS EXCEL .

Round 2 : it happened on the same day . Coding Round for 45 mins.

2 questions were asked .

Difficulty : leetcode easy to medium.

Topic : Strings , Loops , Hashing .

[If u have done 100 leetcode problems then you can be confident to solve the coding round too.]

Round 3: Communication Test for 20 mins

Basic English speaking and listening test.

School level difficulty .

Round 4: Interview for 30 mins

My on campus interview was very simple. Started with an introduction . No technical questions asked .No DSA asked. Talked about my projects for some time. Asked about my

future goals. And it was over .

Try to explain technical details about your projects or internship .

That's it. Overall it's a simple interview.

But a word of advice - Accenture is a service based company which is very different from a product based company .It is more suitable and practically a jackpot for non circuit branches. Roles or tech stack or location are very flexible(Not fixed even after joining) .You won't even know what you gonna work on after joining.Try to keep accenture as your plan B. But still, accenture is a good start for beginners.
