

PLACEMENT EXPERIENCE – APPIAN

Name: Muthu Palaniyappan OL (2020115054)

Department: IT

Year Of Passing: 2024

CGPA: 8.54

Appian is a software company that automates business processes. The Appian AI-Powered Process Platform includes everything you need to design, automate, and optimize even the most complex processes, from start to finish. They have office locations all over the world and in Chennai in India.

CANDIDATE PROFILE:

First step of getting placed in a company is getting shortlisted for an interview. So try to maintain a CGPA of at least above 8.0 because many companies do filter based on CGPA. Don't fill resumes with things you don't know. Whatever is in your resume will reach the company before you go for an interview. Be strong with basics and have good projects in your resume. Have a perfect understanding of your choice of tech stack for your projects.

PRELIMINARY ROUND:

The first round was an Online Assessment which was held on Glider platform. It had 2 sections – MCQ and Coding.

The MCQ section had 5 easy questions which were a mix of debugging and output questions.

The coding section had 2 questions – one easy and one medium. We had to code only in Java.

- The first question was an easy leetcode problem related to arrays and hashmap.
- The second question was a medium one which was breadcrumbs on a website. Given an `ArrayList<ArrayList<String>>` navigations generate the actual navigation tree.

I was able to solve both the questions. 38 students were shortlisted for the interviews.

TECHNICAL ROUND 1 (40 mins):

This was an offline interview at CUIC. Firstly, I was asked to introduce myself and then one problem solving question was asked. I was asked to solve a [majority element](#) and there was a follow up question to solve it in $O(1)$ space. I was able to solve both.

TECHNICAL ROUND 2 (40 mins):

This round consisted of problem solving and resume related questions. The problem solving question was based on binary search with a few modifications. I gave the easy approach and later optimized it. I made some mistakes when I was trying to solve the problem but my approach to solving the problem was right. The interviewer asked me to talk about my favorite project and then he asked too many questions regarding it.

HR ROUND (10 mins):

There were a few simple questions like where I come from, my family and academics. A few questions from my resume were also asked. And finally he asked if I had any questions for him.

PREPARATION STRATEGY:

- Follow these sheets:
 - <https://neetcode.io/roadmap>
 - <https://takeuforward.org/interviews/strivers-sde-sheet-top-coding-interview-problems/>
- Follow these YT Channels
 - <https://www.youtube.com/@takeUforward>
 - <https://www.youtube.com/@NeetCode>
 - <https://www.youtube.com/@RachitJain/videos>
- Practice Here:
 - <https://leetcode.com/>
 - <https://www.geeksforgeeks.org/>
- Learn DBMS, OS, Networking
- Do good projects (A Project is considered as good only you have invested a lot of time to solve some problem, it should not be generic project, it should be interesting enough to keep interviewer engaged)

TIPS:

- Have all the notes for DBMS, OS, Networking

- They could ask you to design fully normalized database for a system and then ask you to write queries
- They could ask you what's TCP/UDP and Difference between them
- Have all your project's repo link and demo links updated and ready
- If its a online interview instead of explaining the project just show a demo of the project, if its a live hosted project do send the link of the project to interviewer
- Do know all the components and tech stacks you used in your project and give clear reason why you choose that tech stack
- You should steer the conversation with interviewer to focus on the strong areas of you
- Have a solid foundation of basics for whatever concept you're talking about, they judge a lot about your basics. If you dont know better say that you don't know.
- Do prepare for standard questions
- Sometimes interviewer will give you clues, be ready to use these clues they are there to help you
