

About the Company

Appian Corporation is an American cloud computing and enterprise software company headquartered in McLean, Virginia, part of the Dulles Technology Corridor. The company sells a platform as a service for building enterprise software applications. Appian is a leading pioneer in low code platforms and process automation. It was founded in 1999.

About the Role

I was recruited as a Software Engineer. It mostly involves developing the Appian product and needs a proficiency in Java. Previous internship experience helps but if not it's not an issue. Git and Github skills are an additional plus.

Preparation Strategy

- It's never late to start preparing.
- Choose a programming language(Java/C++) you are comfortable with before the preparation and start using leetcode/GFG/HackerEarth.
- Start with basics such as Arrays and Strings. Have a strong foundation in recursion before moving with Graphs, DP, Trees
- Daily Practice is important and also refer the previously asked coding question with respect to the company.
- Some companies might also ask MCQs about Java, React, C++, OOPS and SQL in the first round.
- Have an in-depth level of understanding of your projects mentioned in the resume (The Projects can be simple but you should know the in and outs).

Placement Drive experience

Online Test

- Java and OOPs MCQs
- 2 Technical coding questions (1 medium, 1 Easy) which we were asked to solve in Java

Technical Round- I

- Asked about my internship experience and Project asked questions like,
 - What was the hardest part during the internship and how did I overcome it?
 - What did I do during my internship?

- Chose one of my projects and asked me to explain it on a higher level.
- Why chose the specific tech stack for the project?
- After this a code pair session with the interviewer, a Hard level Java OOPS question was asked. Solve the question interacting with the interviewer. It is fine if you don't arrive at the exact solution but think out loud. Provide a plausible solution if you even don't know the exact syntax or solution.

Technical round - 2

- Same general questions about my project and internship were asked in this round too.
- <https://leetcode.com/problems/subarray-sum-equals-k/description/> was asked to be solved

HR Round

- Personal Information which was mentioned in the Resume was asked.
- Have a question about the company in hand. Always ask a question about the company or role at the end (It shows your interest)

Tips and Tricks

- Interact with the interviewer, not just answer the questions they ask.
- Start with the basics in DSA and go to DP, Graphs, Trees etc..
- Don't get dejected on any rejection of the interview or online tests, it's an experience. There is always a company left to attend.
- Learn about the company before going into the interview.
- Try leetcode problems without looking at the solution even if it takes a long time.
- Try to avoid backlogs because most of the companies mention "No Current Arrears".

Placement Playlists and Documents

Striver playlists for DP, Trees, Graphs in youtube.
