

PLACEMENT EXPERIENCE – APPIAN

NAME: SRISHTI GULECHA R (2020115094)

ABOUT THE COMPANY:

Appian is a software company that automates business processes. The Appian AI-Powered Process Platform includes everything you need to design, automate, and optimize even the most complex processes, from start to finish. They have office locations all over the world and in Chennai in India.

CANDIDATE PROFILE:

The most important thing is **resume**. A lot of templates are available on websites with the help of which you can develop one. I used Canva to build my resume. It can be divided into the following sections – personal details, educational qualification, projects (a short description of each – what it is and technologies used), skills, co-curricular activities and certifications/achievements (if any). You can highlight your best projects if you have worked on many. It is advisable to fit your resume to one page and add your photo too. Also, you should be completely aware of what you add in your resume because interviewers will ask a lot of questions based on it. So **do not add anything that you don't know**.

PRELIMINARY ROUND:

The first round was an Online Assessment which was held on Glider platform. It had 2 sections – MCQ and Coding.

The MCQ section had 5 easy questions which were a mix of debugging and output questions.

The coding section had 2 questions – one easy and one medium. We had to code only in Java.

- The first question was an easy leetcode problem related to arrays and hashmap.
- The second question was a medium one which was breadcrumbs in a website. Given an `ArrayList<ArrayList<String>>` navigations generate the actual navigation tree.

I was able to solve the first question fully and the second one partially with a few testcases failing. 38 students were shortlisted for the interviews.

TECHNICAL ROUND 1:

This was an offline interview at CUIC. This round went for 25-30 mins. Firstly, I was asked to introduce myself and then one problem solving question was asked. I don't remember the exact one but it was related to 2-D arrays. It was something like given threads insert them into increasing buckets in a circular manner. I told her my approach first before coding. Once it was right I started coding and handled all the edge cases as well. Finally she asked me about my area of interests and if I have any questions for her.

TECHNICAL ROUND 2:

This round consisted of problem solving and resume related questions. The problem solving question was based on binary search with a few modifications. I gave the easy approach and later optimized it. The interviewer asked me to talk about my favorite project and then he asked a few questions regarding it. Since my resume had React JS in my skills I was asked a few basic questions on it. He finally asked if I had any questions for him. The round lasted for about 30 mins.

HR ROUND:

This was the final round and it went for 10-15 mins. There were a few simple questions like where I come from, my family and academics. A few questions from my resume were also asked. And finally he asked if I had any questions for him.

PREPARATION STRATEGY:

- Start from basics. Get familiarized with coding platforms like geeksforgeeks and leetcode.
- If you are comfortable with C++, learn STL first. <https://www.studytonight.com/cpp/stl/>
- Make a schedule on how you want to cover the topics and stick to it. Firstly, cover these topics – Arrays, strings, linked list, graphs (BFS and DFS), Trees, sort and search. Later focus on – DP, backtracking and bit manipulation.
- Towards the end, practice questions on a daily basis.
- For CP I used the following links:

<https://neetcode.io/practice>

<https://takeuforward.org/interviews/strivers-sde-sheet-top-coding-interview-problems/>

- For DBMS I referred the following links:

<https://www.javatpoint.com/dbms-interview-questions>
<https://www.interviewbit.com/dbms-interview-questions/>
https://www.tutorialspoint.com/dbms/dbms_transaction.htm

- For OS and OOPS:

<https://www.geeksforgeeks.org/commonly-asked-operating-systems-interview-questions/>
https://docs.google.com/spreadsheets/d/1j05cmJ5Jl8O9S4bldKbw_jd0Y4KMZ_5liwyL8vjEbCw/edit#gid=0

- For Aptitude: <https://www.indiabix.com/>

TIPS:

- Stay calm and composed. Do not get tense.
- Know everything that you've put in your resume. Make sure you know everything about your projects.
- Have a good knowledge about DBMS, OOPS and OS.
- Make sure to communicate with the interviewer. Do not remain silent. Feel free to tell them how you are thinking of approaching the problem.
- Prepare some standard HR questions.
- At the end of the interview, you will be asked if you have any questions for them. Do not say "no". Ask them a few questions like – what kind of projects will I get to work, the work culture and something like that.
- Read about the company before going to interview.

Feel free to reach me if you need any help or have more questions at 7299955218. ALL THE BEST!
