

## Athenahealth Interview Experience

### Intern + FTE (Based on Performance)

- Deepak Chandhru N (2022115112)

#### About Athenahealth:

At athenahealth we're using technology to transform the way our friends and family get medical care and how doctors treat patients. We bring cloud-based web and mobile software to the healthcare industry to build an information backbone with the power to transform health delivery.

AthenaOne is athenahealth's integrated EHR (Electronic Health Records), medical billing & practice management, and patient engagement solution that leverages AI to transform your performance.

#### About the Role:

##### Role: Product Engineering

We're looking for developers who want to work on challenging technology problems to create products that medical professionals and patients use every day.

We work with a mix of technologies, but don't hire developers based on particular coding language.

- We're more interested in folks with raw talent and a burning desire to succeed. The most important requirement for

applying is a passion to learn and to make a difference developing enabling technologies.

- Ability to learn and adapt quickly
- Experience reading and writing code in a programming language
- Experience working collaboratively towards project goals and deadlines
- Computer Science (CS) or relevant technical degree program is a plus, though we will consider non-traditional, non-CS degreed applicants.

## Selection Process:

### Day 1:

1. Online Assessment (In Offline Mode)
2. Technical Round
3. Technical + Managerial Round

### Day 2:

4. HR Round

## Round 1: Online Assessment

[1 hr 30 mins]

Online Assessment was conducted at CUIC in hacker rank under the monitoring of company staffs. The online assessment had 3 parts

- i) MCQ question on OOPS – 2
- ii) MCQ question on Data Structure – 5
- iii) Coding Question – 2
  - 1) Minimum Number of swaps required to make the valid parenthesis.

<https://leetcode.com/problems/minimum-number-of-swaps-to-make-the-string-balanced>

## 2) [Lexicographically Smallest Palindrome - LeetCode](#)

From the online assessment, 34 of us has shortlisted for interview. The online test was conducted in morning. The Interview process started in the afternoon of the same day.

If the online assessment was conducted in CUIC, don't wait for optimal approach. Try to pass all the provided testcases with even brute-force approach and try to finish faster.

## Round 2: Technical Interview

[50 - 60 mins]

The interview started with introduction. Then he told me to explain about the project I have mentioned in my resume.

Project (Tech Stack) based Questions:

1. What is use-Effect in React?
2. Which type of React components (Class component or Function Component) is used in my project?
3. What is redux?
4. What is bi-LSTM?

DBMS:

1. What are the normalisation forms?

2. What is indexing? What are the types of Indexing?

3. A SQL query: Return the book title and the number of times each book is borrowed.

\* Book (ID, title)

\* Reader (ID, name)

\* Borrow (BookId, ReaderId)

OOPS, DSA:

1. Explain the 4 pillars of OOPS in C++? (Since, I mentioned I am using C++ for DSA in my intro)

2. Application of stack

3. What is linked list?

4. Simulation of Quick sort for the given array.

Coding:

1. Moving zeros to the end of array.

Eg: [4,0,2,0,8,5] -> [4,2,8,5,0,0]

2. Find the index where the left and right subarray product will be equal.

Eg: [2,3,4,8,6,4].

Output: 3 (left: [2\*3\*4] = right: [6 \* 4])

Then the interviewer asked, do you have any questions. I have asked about his work experience in AthenaHealth. He explained about his past project works and also the project and tech stack that the company was currently working on.

## Round 3: Managerial Round

[45 - 50 mins]

This round was a little tricky one. In this round, the interview was purely based on the resume. He almost asked questions from each and every section in the resume. So, be clear about the details you have mentioned in your resume. He also asked,

1. What do you know about the company?

I told the company project details explained by my previous round interviewer.

2. What are the past interviews you have attended? Why you are rejected in those interviews?

I have acknowledged the mistakes I have done during one of my interviews and what I have done to correct my mistakes. [You should not be harsh on company. Try to acknowledge your mistakes and also explain how you overcome it, in a polite way]

3. Which programming language you will prefer? Python or Java?

I have answered python.

4. What is GenAI? [Since the python team is working on GenAI and OCR based EHR product]

The interview lasted for nearly 50 minutes.

## Round 4: HR Interview

[20 mins]

1. Tell me about yourself
2. Explain any one of your projects
3. Scenario - based question: You are working in a project with a team of 4 members. One of your teammates has a health issue. What would you do to finish the project within the deadline?
4. What is your strength?
5. The works you have done in the clubs?
6. Explain the situation you have worked as a leader in a team.
7. What is AthenaHealth?
8. What are the past interviews attended and why they have rejected you?
9. Family background
10. Are you comfortable with relocation?

Finally, 6 of us were selected.

## My Preparation Strategy:

For DSA preparation, Striver's Sheet will be very useful.

C.O.D.E Series and the ISTA weekly contests have helped me. Try to participate in many coding events and online contests to get familiar in coding.

For SQL, try to solve the SQL 50 series in Leetcode in order. This will help you understand the key SQL concepts for interviews.

For Core subjects, refer GeeksforGeeks and [Neso academy](#)

For Aptitude, refer IndiaBix: <https://www.indiabix.com/>

For Puzzles, refer GFG Puzzles.

For HR questions, there is no exact answer for it. So, prepare answers for the common HR interview questions in your own unique way.

## Previous Interviews list:

Internship: Microsoft, VeGrow, Citi

Placement: Tekion

## Key Suggestions and Tips from My Experience:

Start the preparation before the semester holidays. Once the placement drive starts, there won't be much time for preparation.

In the semester holidays, try to understand the things you are not comfortable and start working on improving it.

For the coding interviews, start with brute force approach. Don't directly go with optimal approach. This was the mistake which led to my VeGrow interview rejection. So, always start solving with brute force and try to give many possible approaches. Explain the time and space complexity for your code and ask for edge cases. They will only check your understanding, so syntax does not matter much.

For DSA preparation, try to solve coding problems in an organized way. The random problem solving will not give the conceptual understanding. Try to solve more coding problems in each topic. Though the quantity varies, solve many problems until you are clear about the 'basic syntax and question format' of that topic.

For the technical questions, try to explain the concepts in details and also provide a simple real-time example. Try to explain all the concepts you have known relevant to that question.

Be clear with the tech stacks you have used in your

projects. Be clear with all the terms you have mentioned in your resume.

For the HR questions, Be honest and confident.

Do the homework about 'the company and the products they are working on', before going to interview. Even this homework might help for your result.

Even after the good preparations, the panel luck and many things that are not in our control also matters.

Still the good preparation only will make you grab the available opportunity when things work in your way. Trust the Process.

I hope you will crack your very next interview.

Feel free to contact for any queries.

OBJECTIVE

Aspiring Information Technology student with a strong interest in programming using C++ and SQL. I enjoy solving problems through code and aim to contribute to real-world software projects while continuously learning and growing.

EDUCATION

College of Engineering Guindy, Chennai

B.Tech. Information Technology

CGPA: 8.62

2022 – Present (Graduation: 2026)

Kshatriya Vidhya Sala Higher Secondary School, Virudhunagar

12<sup>th</sup> Standard: 97% | 10<sup>th</sup> Standard: 92.2%

2020 – 2022

EXPERIENCE

Sports Analytics Internship | CoLLearn, Infosys Springboard (Remote) | February 2025 - March 2025

Match Video Analysis

Identified 2 recurring modes of dismissal contributing to performance insights.

Data-Driven Insights

Processed and structured player data in Excel; conducted comparative analysis of Fab-4 batters (Kohli, Root, Smith, Williamson) using 10+ data points sourced from ESPN Cricinfo.

PROJECTS

FinMate – Financial Education Website

React.js | Node.js | Express.js | MongoDB | Flask | Groq API | News API | YouTube API

Basic Finance Learning

Covers key concepts in banking, stock markets, and blockchain using simplified text explanations and curated videos.

Smart Expense Tracking

Classifies user expenses using a Bi-LSTM model with 85% accuracy, enabling detailed category-wise spending analysis and smarter financial decision-making.

AI-Powered Suggestions

Delivers personalized financial tips based on spending patterns.

Live Financial Awareness

Integrates finance-related news to keep users updated.

Background Removal

Python | MediaPipe | OpenCV

Used MediaPipe to remove backgrounds and create realistic avatars for AR/VR applications.

Background removal for real-time web camera video using OpenCV video.

Offers a practical alternative to traditional animated characters

Knowbot - AI based Education platform

Flask | PostgreSQL | Groq | Assembly AI

Personal Feed

Delivers daily educational content based on subscribed topics with quizzes to assess understanding.

Interactive Learning

Provides concise YouTube video summaries and enables AI-driven QA for enhanced learning.

Weekly Recap

Sends a personalized weekly summary via email.

SKILLS

Programming Languages:

C++, Python (Intermediate), C, Java (Fundamentals)

Web Technologies:

HTML, CSS, React.js, Node.js, Flask, PostgreSQL, MongoDB (Fundamentals)

Tools and Technologies:

Git, Pandas, Matplotlib, Excel (Basic)

Soft Skills:

Problem Solving, Teamwork, Accountability

POSITION OF RESPONSIBILITY

Director of Coding Wing and Programming Mentorship, ACM - CEG Student Chapter

Jun. 2025 - Present

ACHIEVEMENTS

Winner: SQL & Coding Events, Chakravyuh'25 – Madras Institute of Technology

2025

Winner: SQL Sleuth, Sync'24 – Computer Science Symposium, College of Engineering Guindy

2024

Participant: Hackathon, Sustainable Development Hackathon, IIT Madras

2024

State-Level Topper, National Means-cum Merit Scholarship (NMMS) Examination

2017
