

Yuvaraj V – Information Technology

Intern + FTE (Based on Performance) in Athena Healthcare

About the company:

Athenahealth, Inc. is a privately held American company that provides network-enabled services for healthcare and point-of-care mobile apps in the United States.

At athenahealth we're using technology to transform the way our friends and family get medical care and how doctors treat patients. We bring cloud-based web and mobile software to the healthcare industry to build an information backbone with the power to transform health delivery.

About the role:

Role: Software Developer

We're looking for developers who want to work on challenging technology problems to create products that medical professionals and patients use every day. We work with a mix of technologies, but don't hire developers based on coding language.

- We're more interested in folks with raw talent and a burning desire to succeed. The most important requirement for applying is a passion to learn and to make a difference developing enabling technologies.
- Ability to learn and adapt quickly
- Experience reading and writing code in a programming language
- Experience working collaboratively towards project goals and deadlines
- Computer Science (CS) or relevant technical degree program is a plus, though we will consider non-traditional, non-CS degreed applicants.

Selection Process:

1. Online Assessment (In Offline Mode)
2. Technical Round

3. Technical + Managerial Round
4. HR Round

Online Assessment:

OA taken by around **300 members (CS / IT / ECE/ EEE)** and conducted in Hacker rank.

2 Coding Questions + 6 MCQ's (1hr 30mins)

Qn 1. Ball Collision (Medium Level) – Stack Problem

Practice: This problem is very similar to below leetcode problem

<https://leetcode.com/problems/asteroid-collision/description/>

Qn 2. Maximum Umbrella Required – Nothing but Modified version of Classic Coin Denomination problem using DP.

Practice: <https://leetcode.com/problems/coin-change/description>

MCQ's :

1. Queue is implemented using LinkedList, we only know the head address, which operation takes linear time complexity Ans: Enqueue
2. From phases of SDLC.
3. Finding Time complexity for the given nested for loop (bit tricky one)
4. How do you evaluate postfix expressions
I forgot the other two questions but its related to OOPS inheritance and method overriding.

36 members shortlisted from this round

I think they shortlisted candidates based on points first and Time taken to solve.

Luckily, I already practiced both coding problems in leetcode, so I finished the test within 25 – 30 mins.

Technical Round (40 – 50 mins):

1. String Problem (Easy Level)

input : "a3b4c2" => output should be "aaabbbbcc"

follow up question:

numbers can be multiple digits:

input: "a12b100" like this

2. **Finding the closest pair in the array** (Asked for brute force and optimized approach)

3. **Finding the next greatest element for each element in the array** (Asked for brute force and optimized approach)

4. What is **multithreading** (Since I said I have Knowledge in OS in my introduction, so be careful with your words)

5. What is the difference b/w **Abstract class and interface** in java ?

6. How easy it is learning a new language for you ?

7. How do you debug a bug in your code ? (I said about dry running and using debugger)

8. SQL queries (Easy and Medium Level)

Scenario: Binary Tree is represent in the table by two columns (id, parent_id)

Question 1: Given an id of the node, print the type of node (root, inner, leaf)

Question 2: Print no of child nodes for each parent node (ans : simply use count() along with group by parent_id)

Another question: How do you use condition with JOIN queries (Ans : Having clause)

9. What are the various phases of software development life cycle (SDLC) ? (Thanks to SE classes)

10. Any questions about the company (I asked about the tech stack and my roles and responsibilities in intern period and what are the factors they would consider to provide a FTE)

Technical + Managerial Round (40 mins): (14 members attended this round)

1. More Project related questions

Design Database Schema for my Project, some query questions.

2. Which language you are most comfortable with?

3. Apart from coding and development, what you do in your free time?

4. **Frontend or Backend**, what do you like the most and why?

5. Some questions from OA, which have written in HackerRank.

6. **Why did you choose PostgreSQL in your chat app project?, why not NoSQL ?** (I said about ensuring ACID Properties)

7. What do you know about data science. How it can be utilized?

8. How did you get to know about Athena Healthcare?

9. Any questions for me or About company?

HR Round (30 - 40 mins)

1. Walk me through your resume

2. Challenges and key takeaways while developing and hosting your project.

3. Your Hobbies

4. Any idea for Higher studies?

5. Achievements and Extra Curricular Activities

6. Why didn't you done any internships at past?

7. How many interviews did you attended before ?

8. Location Preference

9. Any questions for me

After all these rounds, they finalized 10 members, and I was one of them.

All the best, guys!

Feel free to contact me with you have any doubt,
