

BNY Mellon Internship Interview Experience

About the Company

The Bank of New York Mellon Corporation, commonly known as BNY Mellon, is an American multinational Investment banking services holding company headquartered in New York City. It is by far the world's largest custodian bank and asset servicing company BNY Mellon is an investment company, which provides investment management, investment services and wealth management helping institutions and individuals succeed in markets all over the world.

Coding Round 1

Timing: 90mins.

Mode : Online

Alike all the companies, Coding round was BNY Mellon's first level of selection process. There were 4 coding questions distributed across various domains and rated under different difficulty levels. The platform used was hackerrank. Out of these 4 questions, one was categorised as easy, two were medium and one was hard. Around 25 candidates were shortlisted based on the number of test cases passed and points, for the next round.

Round 2: Technical Interview 1

Timing: 40mins.

Mode : Offline

This round started with my self-introduction. The interviewer asked me to solve an aptitude question which is to find the next number in a sequence then he asked me to write the logic for the coding question - find all pairs of anagrams in list of strings and he asked about the fundamentals of sql and he asked to write the sql query for a easy question. He asked to explain the projects which I mentioned in my resume and also asked me about the recent technologies which inspired me the most and he asked some questions related to that. We are asked to write the answers in pen-paper mode. After answering all the questions he gave and he mentioned, to perform well in the next round.

Round 3: Technical + HR interview

Timing: 40mins.

Mode: Offline.

This round started with my self-introduction. The interviewer asked me to solve a maths question based on Pythagorean theorem. He tested my knowledge of OOPS, to explain the features of OOPS with some real life examples. After I had explained to him, he asked me to explain my projects and he asked some questions related to that. He also asked me about some basics of cyber security like SQL injection, phishing, XSS etc. Since my project was a team project, he asked about my ability to work as a team and how I used to manage team members when their performance is low. Then he asked me how I would keep myself up to date and what steps I made to learn new technologies apart from my curriculum.

16 candidates were given the offer for summer internships.

Tips:

- Practice coding questions and attend contests on platforms like Leetcode, GFG, Hackerrank and codeforces.
- Thorough with basics of OOPS and DBMS.
- Make sure you have 2-3 good projects. It would be better if you have projects on Angular JS and Java (company may expect from you, not compulsory)
- Most of the interview questions will be from the resume.

This is Kanivan S from IT CEG of batch 2024.
