FTE IN BANK OF AMERICA

About the Company:

Bank of America is one of the world's leading financial institutions, offering a comprehensive set of financial products and best in-class advisory services. We combine the best of local expertise and global connectivity for local clients looking to expand globally and for those seeking access to one of the world's fastest growing economies. For this reason, it is a priority market for Bank of America and an integral part of our global strategy. We've been here a long time, having first established a presence in 1964, and our commitment goes beyond business with our social impact initiatives transforming millions of lives across the country. Looking forward, we are uniquely positioned to help India broaden its global connectivity and deliver on its limitless potential.

Preparation Strategy

- I started my preparation in my 6th semester leave (2 months).
- Started with basics of DSA concepts (Arrays, Strings, LinkedList, Stack Queue, Recursion) and then advanced concepts (Binary Search, Trees, Graphs, DP)
- DBMS and OOPs concept are important, side by side I covered that too.
- Computer Networks and Operating System questions depends on the company, so I just learnt only basics of both.

Placement Drive Experience

1. Online Video Assessment

This assessment is a video interview where the questions will be on left side.

- Tell me about yourself and how my qualifications & experience will relate to job role.

- I was asked to solve 2 coding questions. We have to explain approach of both questions.
- Another approach we thought to solve the coding questions and why we used this approach The video assessment will be for 90mintues.

2.Interview Round 1[40 mins]

- He introduced himself first and asked to introduce myself.
- The Interviewer went through my resume for a minute and asked me to explain bout the projects that I have mentioned it in the resume.
- Then he moved to aptitude questions.

1.Basic question on distance calculation when the trains moves at particular speed.

2.Take a two digit number, the difference between the number and its reverse is given. Find the difference between the digits of the number.

Eg: The difference between the two numbers is 18.

Ans:42

- Then he asked me insertion sorting algorithm. what is your favorite sorting technique, why?
- Given trillion records which sorting technique will you prefer.
- Then asked about binary search trees, and then asked now which one do you prefer whether binary search tree or normal sorting technique.
- I have mentioned linux in my resume so he asked few commands like how to find running process id and to kill the process.
- He asked me to write a coding question to sort only the even numbers in the given array without using inbuilt sort function.

Eg:{3,8,4,7,5,2,6,1}->{3,2,4,7,5,6,8,1}

I Have explained the brute fore approach he is ok with it.

- Then he asked few Machine learning questions as I have mentioned an ML project in my resume.
- Then he moved to y technical skills, asked questions on OS, OOPS.
- At last he asked do you have any questions. I asked what is the role he was working there and what was his experience.

3.Interview Round 2:

- It was mainly focused on technical and few managerial questions were asked. It went for almost 30 minutes.
- He asked to introduce myself first.
- Then asked to explain the projects as on overview. Then he asked what are the difficulties you have faced during your project.
- He asked an aptitude question.

Qn: The car has 5 tires ,4 on the wheel and one on the back.
Each tire can run 2000 km. What is the distance the car can travel.

Ans:2500 km

- He is very satisfied with that answer.
- He asked to write code to reverse the given number.
- Then he asked linux commands to list all the directory and to kill the running process.
- Then he asked sql question which was difficult for me.

Qn: The table contains user name, id, login time ,logout time

- He asked to display the difference between each user login and logout time and the difference between the login time of the same user. I can't able to do that but he is ok with that.
- At last he asked which role do you prefer for. I told it could be better if it was a development roll because I have done projects related to that, but I can also manage whatever the you offer me.

Preparation tips:

- Solve DSA problems consistently
- Starts with basics and go to advance concepts
- Side by side, start preparing OOPs, CN, OS and DBMS concepts
- Before going to the interview, refer previously asked interview questions of the company so that you can get an idea of it.
- Be strong at the things that you are mentioning in the resume.
- Clearly explain the roles that you have worked in your project.

All the Best!!!
