

BANK OF AMERICA – PLACEMENT EXPERIENCE

-AKSHAYA S M

About the Company:

- Bank of America is a leading global financial institution, driven by its purpose of helping make financial lives better through the power of every connection. Guided by its principle of Responsible Growth, the company focuses on delivering for its clients, teammates, communities, and shareholders with integrity and purpose. In India, Bank of America operates as BA Continuum India Private Limited (BACI), a wholly-owned, non-banking subsidiary.

Role:

- The freshers from our college are initially recruited for the role of GET (Graduate Engineering Trainee) but the campus role at BoA offers opportunities across diverse areas,
 1. Development: Building advanced FinTech solutions for banking, trading, and risk using technologies like AI, ML, and cloud, focusing on areas like algorithmic trading, anti-money laundering, and digital banking.
 2. Testing: Ensuring product quality through functional and technical testing, risk assessment, and performance optimization using tools like Selenium and JIRA.
 3. Risk Management: Entry-level analysis in cloud governance, cybersecurity, and operational risk to enhance BoA's control environment.
 4. Infrastructure Operations: Software development to meet both functional and non-functional business needs, focusing on DevOps, testing, and automated release.
 5. Production Support: Event management, incident handling, and maintaining high availability in network and infrastructure operations.
 6. Cybersecurity: Safeguarding systems against cyber threats with technologies like SIEM, Splunk, and identity management tools.

7. Identity & Access Management (IAM): Controlling access and managing compliance across various tech environments, ensuring security and governance.
8. Core Security: Monitoring for security incidents, vulnerability assessments, and ethical hacking to protect BoA's digital assets.

Overview of the process:

1. Video interview
2. Technical Round-1
3. Technical Round-2

1.Video Interview:

DURATION:90 MINS

- The test was active on 9th and 10th September and we had to complete it in 48 hours, so it was like we could attempt it at any time in these 48 hours given time and was conducted on the company's platform.
- There were 5 questions (3 video questions + 2 coding questions).
- The camera and microphone were open for 3 video questions and the only camera was on for 2 coding questions.
- The first video question was to "Introduce yourself", the second was "Why should you be a good match for this profile" and the third question was "Explaining the approach of your second coding question" like u need to explain in detail what logic you applied to solve the second coding question.

CODING QUESTIONS:

- Given n test cases each of which has numbers in form of strings, output all numbers from 1 to that number which is not divisible by 5 or 7.

Example: i/p – 24

o/p - 1 2 3 4 6 8 9 11 12 13 16 17 18 19 22 23 24

- Given a string *s* consisting of lower and uppercase letters where each letter has a value from 1 to 26 and we need to calculate the beauty value of this string which is the sum of all alphabets in it.

Note: The string is not case sensitive meaning F is exactly beautiful as f is. Output the maximum possible beauty of this string.

Example: i/p – AbBCcc

o/p – 152

2. Technical Round-1:

DURATION:30MINS

- Major concepts that were focused during my first round were DBMS, Projects and Skills mentioned in Resume.
- The interviewer first asked me to introduce myself. In this, make sure to talk only about the things you are very confident about.
- After that, I was asked to explain my ML project, which played a crucial role in my interview.
- Make sure you know the complete implementation and concepts involved in those projects you mentioned.
- Then I was given an employee table and asked to write sql queries for finding second highest salary, different types of joins.
- I was also given a puzzle to solve: Suppose you have 8L, 5L and a 3L bucket with you. The buckets have no measurement lines on them and you are asked to measure exactly 4L of water using the three buckets. How could you measure exactly 4L water using only those buckets and provided you have as much extra water as you need ?

TIPS:

Don't get tensed and nervous in the interview. Be clear and confident while answering questions.

3.Technical Round-2:

- I was asked to write sql queries for student database and perform different types of joins.
- In this round, I was also asked few questions on Excel and python.
- Python played an important role in BOA-interview process.
- What is the difference between list and tuple?
- Syntax of list and tuple.
- Then I was also asked few managerial questions like :
- What would you do if u couldn't complete a task within deadline?
- How will you handle difference of opinions with teammates?
- Where do you see yourself in next 5 years?
- Will you learn new technologies if needed?

TIPS:

While answering managerial questions be aware and think carefully before responding.Be interactive and don't be silent.

IT'S NOT ABOUT WHEN YOU START YOUR PREPARATION. IT'S ABOUT HOW WELL YOU LEARN , UNDERSTAND AND EXPRESS YOUR KNOWLEDGE.

BE CONSISTENT,CONFIDENT AND WAIT FOR UR DAY.

ALL THE BEST!!!!
