

Bank of America Interview Experience

About The Company

BA Continuum India Pvt. Ltd. is a non-banking subsidiary of Bank of America Corporation and in India operates out of Mumbai, Hyderabad, Chennai, Gurgaon, and Gift City (Gujarat, Ahmedabad). It is one of the world's leading financial institutions.

Role

I was selected for the role of software engineer.

Preparation Strategy

I practiced questions from the GFG portal and the ACM C.O.D.E series. I also referred to the code questions from Striver's A2Z DSA course sheet and Striver's SDE sheet.

Placement Drive Experience

The initial round was a video interview on HIREVUE platform where the interview questions were about self-introduction and a few HR-related questions. Then there was an online test on the same platform with two coding questions from arrays. Then the online interview was scheduled later; the first round was the technical round. The interviewer asked me to code an array question and merge sort. Then there were a few technical questions from C++ like pointers. The second round was also a technical round for me where I was asked to write a few SQL queries and were asked a few terms related to finance.

Never give up, keep trying, and motivate yourself when you feel down. Consistent practice will yield wonderful results. I would say Striver's playlist for trees and Dynamic Programming playlists are very easy to understand and give a strong understanding of the concept. Also before attending any company try to solve the company tagged questions from GFG or LeetCode Portal.
