About the Company

Bank of America (BoA) is dedicated to enhancing financial lives through responsible growth, prioritizing employee well-being, diversity, and flexibility. Operating in India as BA Continuum India, BoA's Global Business Services (GBS) offers integrated tech and operations support across banking, trading, and risk functions worldwide. GBS is known for its strong execution, risk management, and innovation.

Job Role

The freshers from our college are initially recruited for the role of GET (Graduate Engineering Trainee) but the campus role at BoA offers opportunities across diverse areas,

1. Development: Building advanced FinTech solutions for banking, trading, and risk using technologies like AI, ML, and cloud, focusing on areas like algorithmic trading, anti-money laundering, and digital banking.
2. Testing: Ensuring product quality through functional and technical testing, risk assessment, and performance optimization using tools like Selenium and JIRA.
3. Risk Management: Entry-level analysis in cloud governance, cybersecurity, and operational risk to enhance BoA's control environment.
4. Infrastructure Operations: Software development to meet both functional and non-functional business needs, focusing on DevOps, testing, and automated release.
5. Production Support: Event management, incident handling, and maintaining high availability in network and infrastructure operations.
6. Cybersecurity: Safeguarding systems against cyber threats with technologies like SIEM, Splunk, and identity management tools.
7. Identity & Access Management (IAM): Controlling access and managing compliance across various tech environments, ensuring security and governance.
8. Core Security: Monitoring for security incidents, vulnerability assessments, and ethical hacking to protect BoA's digital assets.

Overview of the interview process

1. Video Interview
2. Interview - 1
3. Interview - 2

Video Interview

Your video interview will take up to 90 minutes to complete. Please set aside enough time to complete your interview at one time.

- I was asked to solve 2 programming questions along with 3 HR questions.

- The coding questions were mostly based on arrays and strings, and they were quite easy to solve and understand.
- They asked me to explain both questions and the approach I used to solve them in the next segment. We also need to explain the issues we faced while solving those questions.
- Coming to the HR part, you need to provide a self-intro along with the projects you've worked on and skills acquired while working on those projects.
- They ended my interview by asking the standard interview question, "Why should we hire you?"

Interview - 1

Interview (round 1) is a technical interview, following is the list of questions I was asked during the first interview,

- Introduce yourself (including projects too)
- They asked about my language preference, and once I opted for CPP/Python, They asked me to explain the entire OOPs concept in 10 minutes.
- Once I had finished my explanation, they asked me to write a program to explain inheritance and polymorphism among classes.

Some of the basic questions include

1. Is it possible to compile a program without a main function?
2. Can inline functions be recursive?
3. Explain the difference between a list and an array and write the appropriate syntax.

Interview - 2

Interview (round 2) was a technical cum HR interview.

- Self Introduction along with Identity verification
- I did four projects on various timelines and they asked me to explain those in chronological order.
- He asked me about the sensors that I used in my IoT project and their uses.
- Questions about data preprocessing and classification models that I used in my Machine Learning project.
- Linked list - sorting, identification of loop
- Hash Map - Allocation of memory on various fronts, factors affecting the allocation of memory.
- SQL query to find the second-largest salary of the employee in a specific department.
- Python code to find if the word is present in a specific sentence.
- My experience in ISTA as the head of courses and the work that I do.
