

INTERVIEW EXPERIENCE

Company: Barclays

During my interview, I was asked questions on various topics, including:

1. **OOP Concepts:** Be prepared to discuss object-oriented programming principles such as inheritance, polymorphism, encapsulation, and abstraction.
2. **Authentication and Authorization:** Understand the difference between these two concepts, how they are implemented, and common security practices related to them.
3. **Cloud Computing:** I was asked what is cloud and cloud service models (IaaS, PaaS, SaaS)

Additionally, the interviewer asked me to explain the project I had listed on my resume. It's essential to be clear about the project's scope, your role, the technologies used, and the outcomes.

4. **Company Values (RISES):** I was also asked about the company's values, referred to as RISES. You should be familiar with these values (you can look them up online) and think of a real-life incident where you demonstrated one or more of these values. Be ready to share this incident and explain how it aligns with the company's core values.
