

Gopala Krishnan N-Information Technology

Technology Summer Intern at Barclays (2025)

About the Company:

Barclays is a prominent multinational financial services company with a history dating back to 1690. Headquartered in London, Barclays operates globally, offering a broad range of services such as retail, commercial, and investment banking. The Barclays Global Service Centre in India provides world-class technology and operations support to Barclays' global businesses.

Barclays has been at the forefront of innovation in the financial industry, being the first to introduce credit cards in the UK and consistently evolving to meet the needs of a digital economy. The company's emphasis on values such as Respect, Integrity, Service, Excellence, and Stewardship (RISES) reflects its dedication to building long-term relationships with customers, employees, and communities alike.

About the Role:

Role: Technology Summer Intern

Description:

The role involves designing and developing scalable applications and microservices, creating server components, and implementing functional solutions. It includes collaborating with product owners and end users to gather requirements, conducting unit tests, and coordinating software releases. The position requires participating in code reviews, while also providing support for applications' business-as-usual activities.

Overview of the Selection Process:

The selection process for the Intern role involved two rounds:

1. Online Coding Round

2. Interview Round (Technical + HR)

1. Online Coding Round:

The online assessment had three sections:

- **Section 1:** 12 MCQs on topics like OOPS concepts, code output prediction, and error detection.
- **Section 2:** 1 medium-level Data Structures and Algorithms (DSA) question related to strings.
- **Section 3:** 1 SQL question requiring a query based on a given table structure.

29 students were shortlisted for the interview round after the online coding round.

2. Interview Round (Technical + HR):

The interview was a single session, combining both technical and HR questions, with two panel members. They were both chill, making the experience stress-free. I first introduced myself and then the interview continued with both technical and HR questions.

Technical Questions:

- Basic DSA question: Swapping two variables without using a temporary variable.
- SQL: Questions related to different types of joins.
- Computer Networks: Protocol-related questions.
- Discussion about my projects, including the tools and technologies I used.

HR Questions:

- Who is your role model?
- What do you expect from Barclays?
- Scenario-based question: How would you meet a project deadline if you were an employee?
- Where do you see yourself in 5 years?

Finally, they asked me if I had any questions for them. I asked the panel members:

- What are the responsibilities of the intern?

- What should the intern learn before starting the internship?

Among 29 students, 14 students were given the Internship opportunity at Barclays.

3. <https://www.youtube.com/@takeUforward>

Preparation Tips:

1. **DSA Preparation:** Follow Striver's DSA sheet and Neetcode for DSA preparation.
2. **Technical Subjects:** Be strong and learn fundamental concepts in Computer Networks, OOPS and DBMS.
3. Understand the questions thoroughly and answer with confidence during interview.
4. Prepare regularly and stay consistent with your efforts.
5. Ensure you convey your answers clearly and be calm during the interview.
