

# PLACEMENT EXPERIENCE 2023

Mithulesh P - 2020115049

Barclays, a prominent global bank founded in 1690, operates in over 40 countries, offering a wide range of financial services from retail and corporate banking to investment services. Barclays consistently ranks among the top global banks, often featuring in the top 10 for financial services and investment banking. It focuses on digital transformation, leveraging technology to enhance customer experiences and streamline operations. For software development engineers, Barclays presents dynamic career opportunities in a tech-driven, evolving environment.

Hiring Role: HTD Technology Graduate Analyst

## Round - 1

The test was open to all students who applied and met the eligibility criteria for CGPA. It was conducted on HackerEarth and consisted of two sections: one MCQ section and one coding section.

The test included 12 MCQs, 1 SQL query, and 1 coding question. The questions were based on Java, C, C++, pseudocode output, DBMS, SQL, and OOPs. Having a strong knowledge of CS fundamentals and SQL will help you clear this round. Practice more technical aptitude and output prediction questions.

The SQL query was straightforward and easy, framed within a lengthy paragraph.

Coding question:

Lexicographically smallest string

## Technical Round

Around 45 students were selected for the technical interview, and I was among them. My interviewer is working as a Vice President. When I introduced myself, mentioning my role as the NSS General Secretary, the interviewer seemed intrigued and asked me to share a

problem I solved in that role. After that, he shifted to technical questions and wanted me to explain one of my projects. I chose to explain the more complex one.

The interviewer was keen to know more about my project, including the tech stack we used and the purpose behind it. Since it was a departmental project and I only handled a part of it, he asked about the software methodology we used. I mentioned Agile, and he probed further about how often we held reviews and why Agile is advantageous compared to other methods.

As we continued, he inquired about cloud management, specifically regarding the type of storage and security groups I used in Azure, and also asked some questions about NodeJS. Then came two SQL questions: one about joins and another about aggregation, including some follow-ups.

Next up were coding questions, including two about binary trees. The first was about checking if a binary tree is balanced, and the second was about finding the Least Common Ancestor. For both, I had to write out the code. He also asked me to explain a question from a contest where I had won a prize.

To wrap things up, he asked a few questions about Barclays, such as why I wanted to work there and what my plans for higher studies were. These were the types of HR questions which were asked.

The company conducted only one technical interview round. 14 students were finally selected based on their performance and I was one of them.

***P. S. Don't expect simple questions. In interviews with other companies like Oracle and BNY, I have encountered questions on topics such as multithreading in Java, dynamic programming, recursive SQL queries and procedures, designing database schema, system design, and operating systems (like LFU cache implementation).***
