About the Company

Barclays is a leading global bank, founded in 1690 and headquartered in London. It operates across more than 40 countries and offers services in retail, commercial, and investment banking. In India, the Barclays Global Service Centre supports its worldwide operations with cutting-edge technology and innovation.

Selection Process

The recruitment had **three main rounds**:

1. Online Assessment

- Total **25 questions**.
- **20 MCQs**:
 - Topics included **C++, Java, OOPs concepts, DBMS**, and **output prediction from code snippets**.
- **5 SQL questions**:
 - Required writing queries (joins, subqueries, etc.).

This round tested both programming fundamentals and database knowledge.

2. Technical Interview (20–25 minutes)

The panel started with an introduction and project discussion.

Questions I faced:

- Tell me about yourself.
- Explain your projects.
- Why did you choose the tech stack for your project?
- Project-related follow-up questions.
- Write two SQL queries on paper:
 - One using **JOIN**
 - One using a **SUBQUERY**
(I was able to answer both).
- Do you know Python? (I said I'm at an intermediate level, and they asked a few basic Python questions).

3. HR Interview (taken by another panel member, lasted ~30 minutes)

The HR was also technical in nature, but with additional general questions.

Questions I faced:

- Tell me about yourself again.
- More questions about my project.
- Questions about GitHub .
- Given a **bar chart of developer workloads**, I was asked to write **Python code** .
- General HR questions like:
 - What do you do in your free time?
 - Difference between **ChatGPT** and **DeepSeek**.
 - Do you use AI? Do you think it is useful?

Preparation Tips (From My Experience)

1. DSA & Programming Basics

- a. DSA Preparation: Follow Striver's DSA sheet for DSA Preparation
- b. Revise OOPs ,OS,DBMS fundamentals.

2. SQL Practice

- a. Be very comfortable with JOIN, GROUP BY, SUBQUERIES.
- b. Practice writing queries .

3. Projects

- a. Know your project inside-out.
- b. Be ready to explain **why you chose your tech stack** and **what could be improved**.

4. Python & AI Awareness

- a. If you mention Python/ML in your resume, expect practical questions.
- b. Stay updated on **AI tools and current tech trends**.

5. HR Prep

- a. Prepare a clear **“Tell me about yourself”**.
- b. Be ready for general questions about hobbies, teamwork, and using AI tools.
- c. Answer confidently, even if you don't know everything.

Final Note

The interviewers were very friendly and made the whole process stress-free. My biggest takeaway is that **Barclays focuses not only on technical skills but also on how you explain your projects and adapt to new technologies like Python and AI.**
