

INTERVIEW EXPERIENCE

Name: SANJAYRAM R

Reg no: 2018115095

Email: sanjayramramesh@gmail.com

Company: Caterpillar India Private Limited

The recruitment process consists of 4 rounds. 1st round is aptitude round, after finishing the 1st round eligible students appeared for 2nd round which is a coding round, few more students were filtered in this round and the selected students appeared for 3rd round which is Group Discussion, again the selected students appeared for the final round which is a one to one interview HR + Technical.

ROUND 1:

This is a aptitude round contains, quantitative aptitude, verbal - logical reasoning and technical aptitudes conducted in AMCAT platform. This is not a major eliminator round, students who answered reasonably well were selected for the round 2. Round 1 was held on 6.00 pm and the selected candidates received link for round 2 by 9.00pm on the same day.

ROUND 2:

This round was held on the same day of round 1 from 9.30pm - 10.30 pm. This is a coding round, 2 questions were given one from array and other from string both were easy. I answered both the questions and all testcases were passed. This is also in AMCAT platform.

ROUND 3:

From round 2 shortlisted students were asked to appear for Group Discussion, this is round 3 which is a major eliminator round. This round was held few days after the round 2 . The shortlisted students were grouped into a team of 6 where both CS and IT department from both CEG and MIT were there. This round was conducted in MS TEAMS and we were given 2 topics 1. Globalization is a boon or bane - 15mins 2. Bit coin - 15 mins. Out of 6 students, 2 students who spoke well were selected for the next round from each team.

ROUND 4:

Round 4 is a HR + Technical Interview , which was held on the same day, selected candidates received MS TEAMS meeting link. There were 4 interviewers, 2 handled HR and other 2 handled Technical part, this round went more than 45 mins for me.

Initially they asked me introduce my self, I spoke all about my school education, my projects, my Intern, my area of interest, my hobbies and my achievements. Then They asked me to completely explain 2 of my projects, after explaining the 4 interviewers questioned me about all the technical stacks in my project. This was the hectic part of the interview because they went very deep inside the project, such that only if we had sincerely done the project we could answer their questions. Since I did my project in firebase they also completely questioned me about firebase. Questions about my project went more than 30 mins. Then they asked me a coding question, **There is an array of 0s and +ve integers, we need to sort the array such that all the 0s comes first followed by other elements, but in the same order as if they appear in the original array, i.e)only 0s should be sorted other non 0s should not be sorted.** 1st I gave a brute force approach, but they asked about the time and space complexity and asked me reduce it, then i gave an optimized approach and they accepted it.

Then at last they asked whether I have any questions to ask them, I asked what will be my role in Caterpillar and how was my performance and what are the areas I should improve. I personally recommend to ask questions back to the interviewer it will always increase the probability of getting selected.

NOTE:

1. Always be confident while speaking to the interviewer, even though u give wrong answer don't lose your confidence your confidence plays a major role.
2. Always have a smile, don't show your emotions to your interviewer.
3. Be patient and polite and use your words carefully.
