

SAMIUKKTHA DHARMALINGAM - Information Technology – ICG PRODUCTION SUPPORT intern at Citi CSC

About the Company:

Citi's Client Solution Center (CSC) is a specialized unit within Citibank that focuses on providing client-centric solutions and support services. The CSC serves as a hub for client engagement, delivering a wide range of services such as technical support, transaction processing, and relationship management. It leverages digital tools and technology to enhance client experience, streamline operations, and offer tailored financial solutions. The CSC is part of Citi's broader strategy to optimize service delivery and improve client satisfaction across its global network.

About the Role:

Citi's ICG Production Support under the Optimization and Enablement team is responsible for monitoring and resolving system issues, optimizing processes, and enhancing service delivery for institutional clients. The work involves data analysis to identify areas for improvement, automating tasks, reducing duplicate tickets, and collaborating with teams to maintain efficient operations and client satisfaction. My role in particular was to perform data analysis on a particular appli

Overview of the Process:

The overall process consisted of

- An Online coding contest in SHL platform
- Interview Round 1 – in CUIC
- Interview Round 2 – in CUIC
- HR Round - online

Domains offered for Intern:

EO&T – Enterprise Operations and Technology

ICG

PBWM – Product Development

Online coding contest in SHL platform:

The coding contest was conducted in SHL platform. There were MCQs and coding questions.

MCQs were simple aptitude questions and SQL queries based questions. The coding questions were on basic array manipulation.

60 students were shortlisted for interview process of ICG intern.

TIPS for Online Test:

Keep track of time and try to finish as soon as possible. While typing the code keep in mind the time complexity as test cases may fail if it exceeds the execution time limit.

Interview Round 1 and 2:

As ICG Production Support is not a developmental role, the interviews were fairly simple and easy. Almost all the questions were based on my resume. For any achievement mentioned, they asked to tell more about the process.

For the projects, as I explained, they asked some related questions on it but nothing too technical.

For majority of the interview, the interviewers spent time explaining the role and what Citi CSC does. Very few questions related to production support were asked. One of the questions was "If an user application goes down or faces some issue, what will your steps be to make the customer at ease?" I started off by saying how customer satisfaction is important but so is ensuring security and proper functioning of a bank application and hence the fixing of the issue must not be rushed. Firstly, in order for the company to be notified of occurrence of any issue, there must be some sort of mechanism for the customers to contact the company regarding it. This can be embedded within the application or be done on a separate application (I said this as one of the panel members asked how can the company be notified of an issue). Then, the company can start out by automating mails saying the server will be down and they will be notified once it is back up running again. This is to ensure that the customers don't think they are the only ones facing the issue and also to inform them that the company indeed is working on rectifying the issue. Once the issue is solved, another automated mail can be sent out again.

They asked a few generic questions like which programming language I'm comfortable with and if I know database management systems and so on.

Overall, the interview was quite simple and focused more on my resume and explaining to me the role I would be taking on.

HR Round:

The HR round was short. She asked me a few situation based questions like,

- What would you do in case of a conflict with another team member?
- Have you ever been put in a situation where you had to escalate an issue to a higher official?

For questions like these, always give an example if you have experienced the scenario and what you did.

One other question they asked was if I have any relatives working in the company. In that case, few details about them was asked.

PREPARATION THE DAY BEFORE INTERVIEW:

As I wasn't expecting to get shortlisted, I had very less time to prepare (barely few hours).

- As soon as I got to know about being shortlisted for the interview, I went through the job description and looked into the company's website.
- I watched a few videos online on how to smoothly navigate an interview.
- I went through SQL queries and syntax for data structures.
- Since we had done operating systems in the previous semester, I went through my OS notes quickly to have a rough idea.
- Then i sat and prepared a few questions to ask during the interview.
 - Questions about company
 - Questions on how a day at work would be like for me, if I were to get the internship
 - What all they expect us to know before starting the internship
 - If they have any feedback for me
 - Questions of what the interviewers do on a daily basis
