

Experience Document for Codestax.AI

About the Company

CodeStax.AI is a cutting-edge company revolutionizing digital transformation with AI-powered, no-code platforms. Focused on democratizing technology, CodeStax.AI empowers businesses of all sizes to innovate and adapt rapidly to the digital landscape. The company values transparency, collaboration, and fostering a culture of excellence.

About the Role

Role: Software Development Engineer (SDE)

As an SDE at CodeStax.AI, you will work on building and optimizing AI-powered, no-code platforms, contributing to innovative solutions that transform the way businesses operate. The role involves problem-solving, coding, and leveraging data structures and algorithms to create scalable solutions.

Preparation Strategy

- **Programming Fundamentals:** Strengthen problem-solving skills by practicing on platforms like LeetCode, HackerRank, and GeeksforGeeks.
 - **Data Structures & Algorithms:** Focus on arrays, strings, sorting, priority queues, graphs, and dynamic programming.
 - **Resume Projects:** Be ready to discuss your projects in depth, especially technologies like Spring Boot, APIs, and database interactions.
 - **Puzzles and Logical Thinking:** Prepare for puzzles, such as the 100 doors problem.
 - **Mock Interviews:** Practice technical and behavioral questions to improve confidence.
-

Placement Drive Experience

1. **Online Test (HackerEarth Platform):**
 - Total Questions: 2 (moderately hard).
 - Topics: Algorithmic problem-solving and logic-based coding.
2. **First Technical Interview (On-Campus):**
 - Location: IT Department, CEG.
 - Discussion:
 - Resume walkthrough and detailed questions on projects.
 - A puzzle: *"100 doors problem"*—Focuses on logical reasoning and understanding.

- DSA Question: Similar to *Asteroid Collision* problem (involving stack/array manipulations).
- Sorting and Priority Queues: Concepts and implementation details.

3. Second Technical Interview (Online):

- Conducted by: Manager and HR.
- Topics:
 - Coding: Solved *Two Sum* problem.
 - Project Discussion: Explained Spring Boot applications, API usage, and user authentication.

Tips and Tricks

1. Focus on foundational DSA topics; clarity in stack, queue, and sorting implementations is essential.
2. Be thorough with your resume, especially the projects section.
3. Practice solving puzzles and moderate coding problems quickly.
4. Work on clear and concise communication for interviews.
5. Familiarize yourself with tools and platforms like HackerEarth.

Preparation Docs/Playlists

- **GeeksforGeeks:** Comprehensive DSA and puzzle resources.
- **LeetCode:** For coding practice.
- **Playlists:**
 - *Abdul Bari* (DSA YouTube Series).
 - *Coding Ninjas* or *Striver's SDE Sheet* for interview prep.

Good luck to all aspiring juniors!
