

Interview Experience

Name: Keerthana S

RollNo: 2018115047

Company: D. E. Shaw India Pvt. Ltd.

Round 1:

It was an online test consist of 3 sections

- 1) General aptitude
- 2) Technical aptitude
- 3) Coding(2)

One of the questions asked :

Given an array, find no of possible combinations of A and B such that all the elements to the left of A is lesser than that and all the elements to right of B is greater than that.

Round 2 (Technical Interview – 1):

- 1) I was asked to explain top two projects in my resume
- 2) Coding question

Array1 = {2,1,2,5,7,1,9,3,6,8,8}

Array2 = {2,5,7,8}

Output = {2,2,5,7,8,8,1,1,3,6,9}

Question is how can I get the output array using Array1 and Array2. I asked him few hints and derived at the answer => Array2 elements that are present in Array1 should be printed first followed by elements in Array1(in asc order) that are not present in Array2. I was asked to write a code for it. I solved it using map and it passed all the testcases

- 3) Questions from dbms, os, sorting algorithms, oops
 - Asked two queries
 - Deadlock and it's handling methods
 - Necessary condition for deadlock to occur
 - Belady's anomaly
 - External sorting

- Stable and unstable sort and asked to give real life scenario for stable sort
- Abstract class and few more questions from oops

Round 3 (Technical Interview – 2):

Since he asked lot of questions in between, I don't exactly remember all here is how much I can recollect

- 1) Coding question (Binary tree)
Find the sum of all the nodes present at the given level
- 2) Coding question on graph
I was asked to tell the approach and all the possible testcases for the specific problem. Also the testcases that generally needs to be considered while creating a coding contest.
- 3) Gave a puzzle to solve. He asked few more questions by expanding its description.
- 4) Asked few questions in OS

Take away:

The interviews mainly focus on testing the coding knowledge and the way I approach the problem statement. Prepare to code in a limited time. Be cool and interactive. Keep asking them questions until you understand it.

All the best!!!

Regards,

Keerthana S
