EUCLOID DATA SOLUTIONS – INTERVIEW EXPERIENCE 2024

Role : Data Engineer

Eucloid visited our campus for recruitment for the first time. The process started with a PPT, followed by an online test. The next day, we had the interview. (All process Virtual)

Round 1: Online Test

As mentioned, the first round was an online test consisting of basic multiple-choice questions. The questions were designed to assess analytical thinking, logical reasoning, and problem-solving skills. Topics included aptitude, mathematics, statistics, verbal ability, and even a few puzzles. Notably, there were no coding questions.

Out of 99 students who took the assessment, 42 were shortlisted for the technical interview. There was a slight delay in announcing the results, but it was communicated by the placement cell around 11 AM the following day.

Round 2: Technical Interview

The technical interview was conducted via Microsoft Teams. It started with a self-introduction, after which the interviewer asked me to discuss my web development projects, particularly one I had listed on my resume. I used the STAR (Situation, Task, Action, Result) method to explain the project. The interviewer asked several follow-up questions, especially about AWS, since I had deployed my project

using cloud services. I provided a detailed explanation of EC2 instances and the steps involved in setting them up.

Technical Questions asked were:

- What is a Data Engineer?
- Can you explain the Star Schema?
- How would you rate yourself in SQL on a scale of 1 to 10?
- What is the difference between Drop and Truncate?
- What is the difference between WHERE and HAVING clauses?
- Which window function is used to access the value in the next row?
- I responded with "LEAD function" and elaborated on the boundary conditions. The interviewer asked further questions about window functions, such as the differences between RANK and DENSE_RANK.
- How would you rate yourself in problem-solving?
- Solve the Water Jug problem: [Water Jug Puzzle Solution](#)
- Solve the 8 Balls Puzzle: [Puzzle Link](#)
- Solve the Cake Cutting Puzzle: [Cake Puzzle](#)

I provided the correct solutions and explained my approach to the puzzles. The interviewer was kind and professional, and he concluded by asking if I had any questions. I inquired if there was anything I could improve, and he responded positively, saying he was fully satisfied with my performance.

A total of 13 candidates were shortlisted for the next round.

Round 3: Interview with Leadership team (Technical and HR)

This round was conducted by the Director of Data Engineering. He began by asking how my previous interview went and then shifted to questions about my project.

He was particularly interested in my cloud experience, so I shared my screen and explained him through both the code and the user interface of my project, explained sequelize ORM elaborately used in my backend.

He asked why I had made specific technical decisions, and I explained each feature in detail.

He also asked about my experience as a domain director for my college clubs, as this was mentioned on my resume. Finally, he posed another puzzle: [Man Fell in the Well Puzzle](#).

At the end of the process, five candidates received offers, and I was so happy to be one of them.
