

EUCLOID DATA SOLUTIONS – INTERVIEW EXPERIENCE -2024

Sakthivel K, B.tech IT

About the Company:

Euclroid is a Data/AI organization that leverages state-of-the-art AI and Data Science technologies to deliver high-impact projects. They create business-critical solutions for Fortune-100 clients and industry leaders across various sectors, including Hi-tech, BFSI, D2C, Healthcare, SaaS, and Retail. They have partnerships with leading platforms like Databricks, Google Cloud Platform, and Adobe that enable them to build and deploy cutting-edge data products and massive-scale data platforms.

Role : Data Engineer

Euclroid visited our campus for recruitment for the first time. The process started with a PPT, followed by an online test. The next day, we had the interview. (All process Virtual)

Round 1: Online Test

As mentioned, the first round was an online test consisting of basic multiple-choice questions. The questions were designed to assess analytical thinking, logical reasoning, and problem-solving skills. Topics included aptitude, mathematics, statistics, verbal ability, and even a few puzzles. Notably, there were no coding questions.

Out of 99 students who took the assessment, 42 were shortlisted for the technical interview. There was a slight delay in announcing the results, but it was communicated by the placement cell around 11 AM the following day.

Round 2: Technical Interview

The technical interview was conducted via Microsoft Teams. The interview was taken by a senior employee. It started with a self-introduction, after which the interviewer directly jumped on to a DSA question, It wasn't asked directly but instead he gave the use-case of a particular data structure in this case he gave me the scenario to access previous and next records in a file-system, and then asked me which data structure will i use in this case? I told him the answer and then he asked me to **implement** the solution using the **doubly linked list**.

Language was my choice, so I used C language to implement since I was comfortable in it, After which he asked me some DBMS related questions like

DBMS Questions asked were:

- **What is Normalization?**
- **What are 1NF, 2NF, and 3NF?**
- **Can a relation in 1NF have primary key?**

Then he asked me a SQL question as below,

orders table:

order_id	order_date	sales_rep_id	approver_id
101	2024-08-01	1	2
102	2024-08-02	3	NULL
103	2024-08-03	NULL	1

employees table:

employee_id	employee_name	department
1	Alice	Sales
2	Bob	Sales
3	Charlie	Sales

Expected Output:

order_id	order_date	sales_rep_name	approver_name
101	2024-08-01	Alice	Bob
102	2024-08-02	Charlie	NULL
103	2024-08-03	NULL	Alice

I was able to come up with a solution using nested joins. Then, he asked me whether I had any questions for me, I asked him about the company and how he was able to keep up with the current technologies that are evolving, he answered me patiently and the interview came to an end.

A total of 13 candidates were shortlisted for the next round.

Round 3: Interview with Leadership team (Technical and HR)

This round was conducted by the Co-founder of the Company. He was very polite and asked me not to panic. Firstly, he appreciated me for doing well in the previous rounds. Then, he asked me to introduce myself. Following this, he asked me about my projects and asked me to choose the most favorite one, and asked why I liked it more than other projects of mine. He asked me about the durations and the contributions from my side for the project. Also, he asked me a few HR questions like my strengths and weaknesses. He also asked me about my favorite subject for which I told **Programming and Data Structures**.

He asked about my score on that subject and asked me a few questions related to sorting. **Explained Bubble, Selection and Quick Sort and their differences and complexity.** After this he asked me whether I have any questions for him, I asked him about his decision to find a start-up, and the qualities that he looks for in his hires. Finally, the interview came to an end, and he told me that they will contact me through the HR-team.

At the end of the process, five candidates received offers, and I was one among them.
