

INTERN DRIVE EXPERIENCE- FIDELITY INVESTMENTS

-SOUMYA R (IT)

About the Company:

Fidelity Investments is one of the leading financial services companies globally, with a mission to help customers and clients achieve their financial goals. Known for its strong work-life balance, Fidelity fosters a supportive and inclusive environment. The team is collaborative, and the company is committed to making a positive impact in the financial world.

PREPARATION STRATEGY:

For my intern drive preparation, I focused on competitive programming by practicing problems on HackerRank and GeeksforGeeks. I stayed in regular touch with Data Structures and Algorithms through YouTube lectures. I also brushed up on concepts from core subjects like DBMS, Operating Systems and Object-Oriented Programming. Additionally, I utilized the materials provided by ACM(C.O.D.E Series) and ISTA.

OVERVIEW OF THE INTERN DRIVE:

Round 1: Online Assessment (Hirepro Platform)

This round consisted of four sections, each with its own time limit:

Section 1:

Multiple-choice questions on English, including reading comprehension, sentence arrangement, synonyms, and more.

Section 2:

Multiple-choice technical questions covering topics such as Computer

Networks, Operating Systems, OOP, C++, Recursion, and Data Structures & Algorithms (DSA).

Section 3:

Coding questions: There were two problems, one of medium difficulty and another of a hard level, focused on Arrays and Strings.

Section 4:

Writing pseudocode: We were asked to write pseudocode/algorithms for two problems. The time for this section was more limited compared to the others.

Around 54 students were shortlisted for the next round.

Round 2: Technical Interview (at CUIC) (30-35 mins)

This round involved questions from all core topics like DBMS, OOP, DSA, Cloud Computing, OS, Computer Architecture and also in-depth questions from projects and technical skills mentioned in the resume.

Around 25 students were shortlisted for the next round.

Round 3: HR Interview (at CUIC) (30-35 mins)

This round assessed both technical and behavioral skills. It primarily included questions about role preferences and the reasoning behind those choices.

12 candidates received internship offers.

TIPS AND TRICKS:

- Focus on improving your communication skills in English which is highly important- Make sure your answers are to the point and do not make them sound confusing.

- Practice competitive programming and DSA on a regular basis.
- Get a clear understanding of all the core subjects and keep brushing up the concepts.
- Include only those projects and topics in your resume that you are confident in, as the interviewer asks questions in-depth from whatever you specify as your areas of interest.
- When the interviewer asks you if you have any questions for them towards the end, please do ask questions. Only then the interviewer will get to know you're looking forward to being a part of their company.
- During the interview, stay calm and avoid panicking. Do your best in answering all the questions. If you absolutely have no idea about something, acknowledge it politely and express your willingness to learn.
- Before going to the interview, make sure you look into platforms like InterviewBit and Glassdoor for previously asked questions specific to the company. Also get to know what the company basically does as there might be questions related to their business and operations.
- Every interview is a learning experience. Particularly, in my technical round, the interviewer, besides asking questions, explained a few concepts which were beyond my level stating that it could be of help at some point of time in future. So regardless of the outcome, every interview offers you a good learning opportunity!
