

My interview experience with Gigamon

Hi, I'm Deepak Chakravarthy C. I have completed my B.Tech in IT and have now joined Gigamon as a Software Quality Assistant. I am writing to document and share my experiences during the interview process at Gigamon, which took place on 25th April 2024. I appreciate the opportunity to have been considered for this role, and I want to provide a comprehensive overview of my interview experiences.

1. Initial Application and Screening:

I initially applied on April 5th through CUIC. Shortly after, on April 8th, I received communication from Gigamon inviting me to participate in an online test. The test was based on aptitude reasoning and network knowledge, as Gigamon is a network-based company.

2. First Round Interview (Technical):

I was called to participate in the interview process on April 25th, 2023. My first-round interview tested my basics in programming and networking. I was asked to explain my past projects, and there were also some questions on data structures.

3. Second Round Interview (Techno-manegerial):

In the second round of the interview, I was once again tested on my knowledge of networking and asked about my past projects, including my final-year project. The interviewer presented some situational scenarios and asked how I would respond. I believe I responded well.

4. Final Round Interview (HR round):

In the HR round, I was asked about my personal details, past interview experiences, and how I would handle certain workplace situations. We also discussed my career goals, both short-term and long-term.
