

SHASHI S B – FTE IN ICANIO TECHNOLOGIES

ABOUT COMPANY-

Icanio Technologies offers comprehensive software development services encompassing Web, iOS, and Android platforms, DevOps Services, AIML solutions, and QA services.

ABOUT ROLE-

Software Developer Engineer at Icanio Technologies is responsible for designing, developing, and maintaining software applications using various technologies.

PREPARATION STRATEGY-

I started by learning Data structure and side-by-side I studied core subjects along with aptitude. I used Strivers Sheet for DSA Preparation and for core subjects like DBMS, OOPS, OS, CN., etc I used geeksforgeeks, javatpoint, w3schools. For aptitude I used R S Agarwal and IndiaBIX.

PLACEMENT EXPERIENCE-

The placement process is an online test, technical interview and HR interview.

ROUND1 (APTITUDE + CODING):

This Round was conducted for 3 hours which happened at CUIC. There were around 15 to 20 Aptitude questions and 2 Coding questions. This test was conducted in coderbyte platform. The first coding question is to implement switch sort on arrays and the second question is Queen check problem which is a matrix question.

ROUND2 (TECHNICAL cum HR):

About 10 students were shortlisted for this round. This happened the next day at CUIIC. I was asked to introduce myself. Then the interviewer asked questions about my projects and Internship. Then he asked questions on Data Structures, about my approach, what data structure can be used, why and asked me to write the code as well. It was mainly from arrays.

(I would like you to focus your preparation on Arrays and Strings as most of the companies ask for this. Then try to go for linked list, tree, graphs., etc. Be strong in what language you use for programming also). He then asked questions from OOPS and SQL.

Next was HR Interview. I was asked to introduce myself once again, then was asked 2 to 3 scenario-based questions and asked how to solve it. They also asked about my past experiences and future goals.

ALL THE BEST!!!!
