

GEETIKA T K - INTERN + FTE AT INFINERA INDIA

About the Company and the Role:

Infinera is a company focused on networking, particularly working with optical fibers and related technologies. Recently, they have also been involved in projects utilizing AI and ML. I have been selected for the Software Developer role, with positions also available for Testers.

Interview Process:

All rounds were conducted offline and supervised by CUIIC.

Round 1: Online Test

The test lasted for about 1 hour and included 10 general aptitude questions, 35 technical MCQs (covering OS and Networks), and 1 coding question (which I solved using maps in C++).

Round 2: Technical Interview 1

This round lasted approximately 1.5 hours. It began with a self-introduction, followed by 15 to 20 scenario-based questions on OS and OOPs. I was then asked to explain all my projects mentioned in my resume. The interviewer then moved on to Networks, asking me to solve client-server scenario-based questions. I struggled with 2 out of 7 questions of the network questions. Additionally, I was asked to write three pieces of code: one based on an OOP scenario, one involving string operations in C++, and another for socket programming.

Round 3: Technical Interview 2

This interview lasted about 1 hour. I was given two coding problems, which I successfully solved in C++.

1) Find the nth node from the end of a singly linked list with only one traversal and without using auxiliary space.

2) Find the palindrome substring in a string and add characters only on the left to make the entire string a palindrome.

I used a two-pointer technique to solve both problems.

Round 4: HR Interview

This round involved a self-introduction and general questions like "Why Infinera?" No filtering was done in this round.

Overall Strategy:

Prepare well in advance on topics like OOPs, OS, DBMS, Networks, DSA, and everything mentioned in your resume. During the interview, stay relaxed, communicate openly, and learn from the interviewer when you make mistakes. It's all about your communication skills and your ability to think on your feet.

My Advice:

Consistent preparation can help you feel more confident.

Unfortunately, I didn't do that—I prepared only the night before the interview.
