

LatentView placement experience

It's a decently sized company around 1000 employees in chennai and a small branch in Bangalore with about 100 employees headquartered in USA

Located in ramanujan IT park next tidel park

Easy going good environment

Free breakfast!!

Data analyst

No need of any specific prep strategy basic python c c++ and problem solving is enough they also specifically asked SQL I think they give preference if u know SQL

But even if u don't know it's alright you can just say it to the interviewer .

They are extremely friendly atleast the PPL who came to interview me.

Special note : they ask SQL window functions

So there are four rounds including online test

1) online test : first part is a psychometric test which anyone should be able to do(easy) then we have the problem solving portion (Easy) the test then we have the technical test .there was a coding question very simple (Easy).Rest of the questions were MCQ

2)Group discussion: Speaking in English is key. Try to talk fluently which is also important . Don't sit silently talk as much as possible while listening to others opinions.(Easy)

3)Technical interview 1 : it was basic python questions sometimes they ask dynamic programming or recursion but it should be very basic

The other question is a logic and problem solving

It should be pretty easy and getting the answer right is not really important your process of getting should be clear so be vocal and explain your thought process .

4) Technical interview 2: same as interview 1 but also asked about the project on my resume and also about final year project.

5)HR interview: its pretty straightforward.

They will specifically asked if you have given gmat or gre . That's the only catch.

No need of any playlists
