

Mini Gnana Sekaran- Information Technology –6 months intern at Logitech

About the Company: Logitech is a globally recognized technology company specializing in designing and manufacturing computer peripherals and software. The company is known for its innovative approach to product development, delivering high-quality solutions in areas such as gaming, video collaboration, and AI-driven advancements. With a strong focus on user experience and technological innovation, Logitech continuously evolves to meet the needs of both consumers and businesses.

About the Role:

Logitech offered two job roles for this internship:

1. Frontend Development
2. Generative AI

Overview of the Process:

The selection process included three rounds:

1. **Written Test** (Technical Aptitude + Domain-Specific)
2. **Technical Interview** (DSA, OOP, OS, Resume-Based)
3. **HR Interview** (Behavioral, Leadership, and Project Discussion)

Interview Process

Round 1: Written Test

- The written test consisted of two sections:
 - **C++ Programming Questions** (Mandatory for all candidates)
 - **Specialized Test:** Candidates could choose between a **JavaScript test (for the Frontend role)** or a **Generative AI test**.
- The test evaluated problem-solving skills, coding proficiency, and understanding of role-specific concepts.

Round 2: Technical Interview

- **Data Structures and Algorithms:** I was tested on various DSA topics, requiring efficient implementations in C++.
- **Object-Oriented Programming:** Questions focused on core OOP principles, including inheritance, polymorphism, and design patterns.
- **Operating Systems:** The interview covered key OS concepts such as memory management, process scheduling, and concurrency.
- **Resume-Based Questions:** The interviewer asked in-depth questions about my projects, the tech stack used, and my problem-solving approach.

- **Leadership & Teamwork:** I was asked about my leadership experiences, team projects, and how I handled challenges.

Round 3: HR Interview

- **Resume Discussion:** The HR round focused on my previous experiences, including internships, projects, and extracurricular leadership roles.
- **Project Discussion:** I explained the project I would be working on at Logitech, detailing the technologies involved and expected contributions.
- **Behavioral Questions:** Questions included how I handle conflicts, work in a team, and adapt to new technologies.

Preparation Strategy

- **DSA & Problem Solving:** Practiced coding problems, focusing on commonly asked DSA topics.
- **OOP & OS Concepts:** Revised core principles, ensuring a strong understanding of system design and OS fundamentals.
- **Domain-Specific Knowledge:** Prepared for the JavaScript and GenAI test by revisiting frameworks, tools, and recent advancements in AI.
- **Company Research:** Studied Logitech's latest innovations, products, and company culture to align my answers with their goals.

Tips & Tricks

- **Choose the Right Track:** Pick a test paper (JavaScript or GenAI) based on your strengths and interests.
- **Master the Basics:** Focus on strong foundational knowledge in DSA, OOP, and OS.
- **Showcase Leadership & Problem-Solving:** Be ready to explain how you led teams, tackled challenges, and optimized solutions.
- **Ask Meaningful Questions:** Engage with the interviewer by asking about the work environment, projects, and growth opportunities.
