

SRIVISHWA P – INFORMATION TECHNOLOGY

FTE in Mindgate Solutions

About the company:

Mindgate Solutions is a leading global fintech company specializing in **real-time payment solutions** and **digital banking technologies**. Established with a vision to revolutionize the financial sector, Mindgate works closely with major banks, payment service providers, and enterprises to offer cutting-edge solutions in **UPI, mobile banking, payment gateways, and AI-driven financial services**. Their innovative approach has made them a trusted partner for secure and scalable transaction processing worldwide.

About the role:

Role: Trainee Software Developer

Mindgate Solutions offers the role of Trainee Software Developer, providing an opportunity to work on real-time payment solutions and banking technologies. This role involves developing secure and scalable financial applications, gaining exposure to Java, Spring Boot, APIs, and microservices, and working closely with banking clients

Overview of the Process

The company usually conducts four rounds, starting with an online test, followed by interviews. However, since the number of candidates was limited, they skipped the online test for us. The selection process included the following rounds:

1. Technical Interview
2. Managerial Interview
3. HR Discussion

Technical Interview:

This round focused mainly on writing code in Java, particularly POJO classes and OOP concepts. There were also questions about the Spring Boot framework and microservices.

Managerial Interview:

In this round, the interviewer also emphasized Java programming, asking how I write and execute Java code, as well as the types of programs I have worked on. Additionally, I was asked about Java packages. The interviewer then presented a DSA question—deleting an element from a linked list—and requested a pseudo-code solution, but I wrote the Java implementation instead.

HR Discussion:

After successfully clearing the technical and managerial rounds, the HR discussion was more of a formal conversation. They had already selected me, so the HR representative mainly confirmed if I was comfortable with the tech stack and the role. She also provided details about the role, package, and benefits, to which I agreed and accepted the offer.

Preparation Strategy:

- Focus on DSA and fundamental computer science concepts.
- Be proficient in the programming language you choose for your career.
- Have a strong understanding of your resume and be prepared to discuss every detail.
- Gain knowledge of backend or frontend frameworks, as they help in securing a developer role.

Tips and Tricks:

- Improve your communication skills and speak with confidence.
- Continuously revise DSA concepts to stay sharp.
- Avoid being blank when faced with questions—think logically and attempt an answer.
- Ask insightful questions to the interviewer at the end of the interview.
- Maintain a well-structured resume that highlights your skills and achievements effectively.
- Strive to clear the online test, as succeeding in it makes the subsequent rounds easier.

Preparation Materials:

- ❖ **For DSA preparation**, follow **Striver's A2Z DSA Sheet** for a structured approach.
- ❖ **For Java development**, check out the [Telusko Youtube Channel](#), as it provides excellent tutorials by an experienced Java instructor with over **12 years of expertise**.
- ❖ Alternatively, you can enroll in [Telusko's Udemmy Course](#) for a more structured and in-depth learning experience.

ALL THE BEST FOR YOUR CAREER
THANK YOU
