About NCR Voyix

NCR Voyix Corporation (NYSE: VYX) is a leading global provider of digital commerce solutions for the retail and restaurant industries. NCR Voyix transforms retail stores and restaurant systems with comprehensive, platform-led SaaS and services capabilities. NCR Voyix is headquartered in Atlanta, Georgia, with customers in more than 35 countries across the globe.

- **#1** POS Software Provider for Retail and Restaurant industries
- **100K+** stores powered by NCR Voyix retail solutions
- **\$227B** transactions processed monthly through our platforms
- **700M+** transactions daily enabled worldwide

As a strong product company, NCR Voyix drives transformation across industries:

- **Retail** - Powering modern shopping experiences with POS, self-checkout and digital commerce platforms.
- **Restaurants** - Delivering seamless dining experiences through self-ordering kiosks, mobile ordering, and loyalty solutions.
- **Payments** - Secure, real-time payment processing solutions enabling trusted transactions.
- **Cybersecurity** - Protecting mission-critical systems and ensuring safe, reliable commerce.
- **Field Engineering Services** - Global support and innovation delivery through one of the industry's largest service networks.

From self-checkout systems and digital banking platforms to cloud-based SaaS solutions, NCR Voyix transforms consumer interactions into meaningful experiences.

Role: Software Engineer Intern

Program: India Campus Hiring (B.E./B. Tech - CSE, IT)

Duration: 6 months (conversion based on performance)

Location: NCR Voyix India Offices

About the Role (Software Intern)

I have been selected for a Software Intern position at NCR Voyix, where the internship includes a structured 6-month training period. During this time, I will be working under the guidance of senior engineers to gain hands-on experience in software development, debugging, testing, and understanding enterprise-level workflows.

This internship is performance-based, meaning that full-time employment is not guaranteed but may be considered depending on my performance during the training period. The role provides exposure to real-world

projects, modern technologies, and professional development practices, allowing me to build industry-ready skills within a global product-based company.

Overview of the selection process

Our Online Assessment And Interviews all happened at CUIC . We had four rounds:

1. Online coding round in Hackerank (40 Got shortlisted)
2. Technical Interview (20 got shortlisted)
3. Managerial Interview (10 got shortlisted)
4. HR Interview (All 10 were selected for the internship)

Round 1 : Online coding round (1 hr)

The online coding test was conducted at CUIC through the HackerRank platform. We were given two coding problems, one easy and one hard. The harder problem was pretty challenging , so just try to pass as many test cases even if they are somewhat hard coded.

Question 1:

You are given a set of points on a Cartesian plane. These points collectively form multiple squares, and in a few squares one point is missing. The task is to find and return the missing point for incomplete squares.

Tip: This can be solved cleanly using an XOR-based method or by using set operations to identify the missing coordinate.

Question 2:

Similar to this question <https://leetcode.com/discuss/post/7366207/atlassian-question-how-to-solve-this-by-rjujj/>

Tip: I initially attempted a BFS + factorial-based approach, which gives the correct logic but exceeds the time limit due to constraints. So i just did hardcoding to pass some more test cases which we're vital in the selection for the next round.

Round 2 : Technical Interview(Offline) (1 hr)

Let me start with an important tip: always walk into the interview room with a smile and optimistic energy. My interview panel consisted of two interviewers, one of whom had a managerial/HR role. Since I entered cheerfully and greeted them with a warm smile, they actually commented that it was a good gesture. While first impressions shouldn't be the sole way to assess someone, in interviews they certainly matter.

After the self-introductory questions, they asked me to explain my approach to the Round 1 DSA questions. Since I had thoroughly reviewed where I went wrong the previous night, I was able to present all three solutions, brute force, better, and optimal for that particular problem. This is why it's crucial to always review your Round 1 questions before the actual interview.

Following this, the interview became an extremely deep dive into my resume. They asked questions about every single thing I had listed starting from projects, internship experiences, OOPs, Computer Networks, DBMS, everything was examined in great detail. This experience taught me two important lessons: first,

have thorough knowledge of everything you mention in your resume, and second, never add unnecessary or superficial content to your resume.

This round lasted approximately one hour. I gave my interview around 11 AM, and they informed me I was shortlisted for the next round during lunchtime.

Round 3 : Managerial Round(Offline) (45min)

I didn't expect to say this, but this was the toughest round of all the interviews I have ever attended. Since it wasn't technical, it required pure adrenaline and the ability to think on your feet, building on whatever first comes to mind without getting stuck anywhere. I got really lucky here because I had another test scheduled, and they called me in the middle of it. I genuinely thought my interview was over at that point.

The questions were purely situation-based, and honestly, it felt like a nightmare. I was smiling and trying to stay composed, while the interviewer maintained a completely neutral expression, showing no emotions whatsoever. This was clearly intentional, they were testing how we behave under pressure and how we handle uncomfortable situations.

My advice: always prepare for situational and behavioral questions when preparing for interviews. These rounds can be more challenging than technical ones because there are no right or wrong answers, only how well you articulate your thought process and handle the pressure.

Round 4 : HR Interview(Offline) (10min)

Around ten candidates were shortlisted for the HR round. The interview was brief and focused on basic HR-oriented questions such as why I chose NCR Voyix, my family background, and my willingness to relocate or work from cities like Bengaluru or Chennai. This was the quickest round of the day, and all ten candidates were selected.

The entire recruitment process started at around 8:30 AM and went on until 11:00 PM, making it one of the longest interview days ever conducted at CUIC. When we came out of CUIC it was 12:00 PM. I know it is the worst feeling, you can't even focus on studying. I would recommend to chill for sometime, but do get into the preparatory zone once you know you're next or somewhere in the line, because that'll help to slide back right into where you left off.

Preparation Strategy

For DSA, I mainly followed Striver's A2Z Sheet and the NeetCode 150 list. I started really late, but I was focused and so I could leetcode daily even though when I don't feel like leetcoding. Try to at least solve 2-3 problems daily and make it a habit. I pretty much followed only Striver's youtube videos and Nikhil Lohia since he was using Java.

For DBMS, I practiced the LeetCode SQL 50 problems and HackerRank SQL challenges. SQL 50 was an eye opener, it made me think and feel SQL in a different way. Highly recommend if you struggle with SQL Queries as I was in the beginning.

For the core CS subjects, I didn't follow separate dedicated material. Instead, I revised important concepts from Operating Systems and Computer Networks using quick summaries and explanations from ChatGPT just before the night of the interview, if I was shortlisted.

A Note Before the Interview Process

Before going into the interview process, I want you to know that you are doing a really good job. Let that sink in first. I know these times are very difficult with everything that's going on. Life hits you in every possible way, whether it be personal or academic, which is really stressful. Final year projects, assignments, assessments etc , there's so much to juggle all at once.

Rejections will come. You'll get selected for interviews, move to the second round, and sometimes even reach the HR round only to face rejection. Believe me, I get this. NCR Voyix was my 5th interview, and I was rejected in two HR rounds before this. Life can be cruel, but it always comes back to you at the right time.

Another important thing is CGPA , we would have heard that CGPA doesn't matter, It is enough if one has 7.5 etc. But this is absolutely not the case. Companies first say the criteria is 7.5 but then proceed to do an internal screening based on CGPA if the number of students is more for online assesments. So try to maintain a CGPA above 8 as much as possible.

For whoever is reading this, please don't make the mistakes I made. Focus on the steps you take rather than obsessing over the goal you want to achieve. Luck plays a significant role in placements, and you need to accept everything life throws at you. I know it's easier said than done, but do try. I believe in you—you've got this. I'm hoping you'll get placed in a good company soon.

In case you want to talk about anything , I'm always ears. Here's my number you can always call or leave a message :)
