Information Technology

About the Company:

Gen Digital Inc., formerly known as Symantec Corporation and NortonLifeLock, is a multinational software company co-headquartered in Tempe, Arizona, and Prague, Czech Republic. It provides cybersecurity software and services and is part of both the Fortune 500 and the S&P 500 index. The company has major development centers in Pune, Chennai, and Bangalore, and its portfolio includes well-known products like Norton, Avast, LifeLock, Avira, AVG, ReputationDefender, and CCleaner.

Role: Software Engineer

Location: Chennai

Round 1: Written Coding Test

The first round was a written coding test that included three questions focusing on arrays and strings:

1. Arrows Alignment Problem: Determine how many arrows should be rotated to make all of them point in the same direction.

Input: “^>><>”

Output: 2

2. Three Positive Integers Sum: Find the maximum sum of three positive integers from the given array.

Input: {4, -2, 0, 5, -2, 1, 6}

Output: 10

3. Find Repeating Letter: Identify the letter that repeats in a string where all other characters are distinct.

Input: "aba"

Output: 'a'

Note: This required an efficient, in-place solution to minimize time and space complexity.

Round 2: Technical Interview 1

This interview was focused on my resume, projects, and technical knowledge, including deep questions on my project details. Key areas covered included:

Data Structures and Algorithms (DSA): A coding question to reverse a linked list.

Note: This required an efficient, in-place solution to minimize time and space complexity.

Aptitude:

- 1) Write an optimized solution to find the square root of a number.
- 2) Three humans and three demons are on one side of a river, and they need to cross to the other side using a boat that can hold only two passengers at a time. The rule is that if the demons outnumber the humans on either side of the river, the humans will be in danger. The challenge is to figure out a way to get everyone across the river safely, without ever letting demons outnumber humans on either side.

Other Technical Areas: Questions on Object-Oriented Programming (OOP), Operating Systems and DBMS.

Round 3: Technical Interview 2

The second technical interview involved in-depth coding and problem-solving:

Coding Question: Move all zeroes to the end of the array.

Input: {2, 0, 1, 0, 5, 6}

Output: {2, 1, 5, 6, 0, 0}

Note: This required an efficient, in-place solution to minimize time and space complexity.

Other Questions: Write OOP code and SQL code, along with questions from my resume. I was also asked to explain my project in detail and provide code examples.

Round 4: HR Interview

In the HR round, I was asked to discuss my resume in detail, including specifics about my projects and some coding examples from my work. They also inquired about my final year project, exploring its objectives and technical aspects. Additionally, this round included general HR questions to understand my background and career goals.

Mode of test and interview: Offline

The interview and test focused on core subjects such as **Data Structures and Algorithms (DSA)**, **Database Management Systems (DBMS)**, and **Operating Systems (OS)** and **Aptitude**. Additionally, it's advisable to be well-prepared in **Computer Networks**, as some interview panels included questions on

networking concepts. Make sure to thoroughly understand and be prepared to discuss any projects, skills, or tools listed on your resume, as these were areas of detailed questioning in my experience.

22 students were finally selected based on their performance in all the rounds.

ALL THE BEST!
