

KARTHIKEYAN M S - Information Technology

– Oracle Interview Experience

About the Company:

Oracle is leading the digital revolution by helping nearly half a million businesses succeed in a world of growing connections. The company offers specialized solutions through nine Global Business Units (GBUs) that focus on different industries such as Retail, Communications, Utilities, Construction, Financial Services, Health, Food & Beverages, and Hospitality. Known for its innovative software, Oracle is a major player in these fields and continues to shape the future of technology.

Overview of the Process:

The overall process consisted of

- An Online coding contest in Hackerrank platform
- Interview Round 1 (Technical) – in CUIC
- Interview Round 2 (Technical) – in CUIC
- HR Round

Online coding contest in Hackerrank platform:

The coding round was divided into sections

- Aptitude MCQ
- MCQ on English
- 1 coding Question

The coding question I got was based on Arrays and it was quite simple only. Make sure that you submit your answer soon. For MCQs don't spend too much time if you don't know any 1 or 2 questions. Time plays a major role in shortlisting from online assessments.

Interview Round 1 (Technical):

In the first round I got questions from topics like OOPS, DBMS, 1 Mathematical Aptitude question, and a question from HTML CSS. In my resume I mentioned that I'm good at Linux and after seeing that the interviewer started asking a lot of questions from linux. After some easy and moderate questions, I got 2 hard questions from linux commands for which I knew only half of the answer and I told the interviewer that I don't know the answer fully. Then he asked me to write the search query i will use to search for the solution in google. He also asked me on a scale of 5 how I would rate myself in linux skill and I answered as 3 out of 5. The interview took around 45 mins and at last he asked if I had any questions for him and I

asked 2 questions that arose inside me during the PPT. Please note that the complexity of the questions asked will vary for different panels.

Interview Round 2 (Technical):

The second round took around 1 hour. The first question was what was my favourite programming language and then the question shifted to the difference between Java and C++. I was also asked to draw the flow diagram of the lifecycle of a java program from source code to output.

Then the topic shifted to the projects that I've mentioned in my resume. I was asked to explain my favourite part of my project.

To my surprise, he was also interested in my linux skills and asked the same 2 questions that were asked in the first round. Luckily I already referred the solution for those questions in my lunch break so I got the bounty

Then came the DSA part. I was not asked to write code for any questions, rather he told me to explain the difference between any tree and a graph. I took Binary Search Tree vs Graph. I randomly chose some numbers and inserted them in the data structures and I performed search operations. In the graph I explained about BFS and DFS and that was all about my DSA part in my interview. Again it depends on your interviewer. I heard that my friend got around 10 coding questions in the 2nd round in a different panel.

After that I got a Verbal aptitude question and then a Logical Aptitude question. A trick I will suggest is to interact with people who finished some rounds of the interview. Because I found that aptitude questions kept on repeating among the different panels.

HR Round:

It went for around 10 mins. The questions were

- Tell me about yourself
- what is your weakness
- Tell me about a time when you felt very happy in your life
- Do you have any questions for me ?

and that's it.

TIPS:

- Finish the online test as soon as possible
- Never put anything in your resume without knowing about it
- It's helpful to put unique things in your resume to stand out of the crowd but make sure that you have a strong foundation on it
- Interact with fellow people who finished any rounds before you
- Ask questions to the interviewer
- Keep cool and don't get tensed
