

SRI DHARANI R – Associate Application Developer

<https://www.linkedin.com/in/sri-dharani-r-695a37256/>

ABOUT THE COMPANY:

Oracle OFSS (Oracle Financial Services Software Ltd.) is a major global provider of IT solutions, software (like Oracle FLEXCUBE), and consulting for the financial industry, acting as an Indian subsidiary of Oracle Corporation, offering digital banking, risk management, and AI-driven tech to banks worldwide, formerly known as i-flex Solutions.

ROUND DETAILS:

Read Previous experiences from Google (Glassdoor, interviewbit) , you will get some idea about the current process.

Online test:

Questions:

- 1) MCQs (API's, Cloud Technology, Product Development lifecycle, etc.)
- 2) Two coding questions (Medium level question)

The number of rounds varies according to the candidate.

Three Rounds:

1) First round – Technical round

Covered all the coursework subjects.

Have a proper resume with a detailed explanation of projects and then volunteer activities. You are expected to explain your project and volunteer activities.

2) Second round – Technical round

Given the application, you are supposed to give a complete system design from ui to server logic.

3) Third round – Technical round

Questions on tech stack mentioned in the resume.

Four puzzles were asked and expected to explain the thought process.

TIPS:

For the DSA preparation strategy, just follow Striver's A to Z DSA course. For studying concepts, you can get the materials from our department resources — that's where I got all my resources, and I studied from those only.

For coding practice, apart from Striver's material, try solving additional problems related to the company you are applying for.

For computer science concepts, you can refer to our department placement materials.

You can also refer to Geeks for Geeks for studying these concepts.

Feel free to reach me if you need any help.
