Oracle

About the Company

Oracle India Pvt Ltd, a subsidiary of Oracle Corporation, is a leading provider of enterprise software and cloud solutions in India. The company offers a wide range of products and services, including cloud applications, database management, and enterprise software solutions, while also driving significant research and development efforts in areas such as AI and big data.

Oracle plays a pivotal role in transforming sectors like finance and infrastructure through its advanced technology solutions. In finance, Oracle provides robust software and cloud solutions that help financial institutions manage operations, risk, and compliance efficiently. Through its partnerships, innovation, and corporate social responsibility initiatives, Oracle India is at the forefront of digital transformation in the country, helping businesses and government entities harness the power of technology for growth and efficiency.

Role: Association Applications Developer

Employment Type: Intern (6 months) & FTE

Location: Bangalore / Hyderabad / Mumbai

Overview

Number of rounds : 3

- 1) Online Test - Hackerrank
- 2) Round 1 - Technical Interview (Offline)
- 3) Round 2 - Technical + HR Interview (Offline)

Online Assessment

The online assessment was conducted in Hackerrank Platform consisting of coding and multiple choice questions.

Time limit: 1hr 30 min

1 Coding Question → Medium level (Depends on the set usually Easy to Medium Level)

The coding question was of medium difficulty. Initially, some test cases did not pass. Instead of spending too much time on the coding question, I switched between the MCQs. By the end of the test, I was able to pass all the test cases and aimed to score as high as possible in the MCQ section.

35 MCQ's covering

- Aptitude
- OOPS
- DBMS
- Operating Systems and Computer Networks

The Multiple choice questions focussed on the computer science fundamentals. I made use of the full allotted time given to complete the test. However, it is advised to complete the test as quickly as possible to get shortlisted for the subsequent rounds

Tips

- *Think twice, code once* : Understand the question thoroughly before starting to write code.
- Ensure proper lighting and a quiet environment to minimize distractions since its an online AI proctored test
- Complete the test within the given time and aim to work as efficiently as possible.
- Focus on smart work by optimizing your approach and managing your time effectively.

There were two roles offered by Oracle, one in the Infrastructure Sector and other in the finance domain. 22 students were shortlisted for the interview process for the finance sector domain and I was one of them.

No filtering was done based on CGPA throughout the whole process . However it does not work with all the companies and it is always required to have a decent CGPA.

Round 1 - Technical Interview

The interview lasted around 45 minutes. The interviewer on my panel introduced himself and then asked me to introduce myself. Based on my introduction, he started asking questions and proceeded with a few technical questions..

The following questions were asked

- Simple coding questions like reverse a string,etc were asked. I was asked to write the code in the paper in C++ as well as in Java. The interviewer expected me to know Java.
- Exception Handling and its types in Java
- OOPS questions - particularly encapsulation and its advantages
- Triggers
- DBMS - given some scenario I was asked to write queries (using DDL,DML commands)
- Challenges faced during the project and how I had handled it
- General questions regarding banking and finance

Resume and Project

During the interview, I was asked to explain one of my projects in detail, followed by a few questions related to it.

The interviewer also thoroughly examined my resume, asking questions about various aspects, including my volunteering activities and achievements.

Tips

- Technical knowledge is crucial, especially proficiency in Java and DBMS (for Oracle)
- While writing code, explain your thought process clearly. If you get stuck, don't hesitate to ask for hints.
- Be prepared to handle unexpected questions, as they can arise at any time.
- Communicate your thoughts clearly and confidently when answering questions.

Round 2 - Technical + HR Interview

The interviewer began by asking me to introduce myself and then proceeded with questions based on my introduction. I was asked about the latest technologies and to explain my projects, focusing on my specific contributions.

- Technical Questions - Finding middle of the linked list, recursion based questions, etc
- Questions on Java
- HR questions
- Simple questions on System Design

The interview lasted for around 30 minutes. The interview went very well and I felt confident about my performance.

Tips

- Always try to articulate your thoughts properly before explaining your answer
- Take control of the interview by guiding the conversation with your answers and explanations
- In most of the interviews, subsequent questions often depend on your previous responses. So be honest and clear in whatever you tell the interviewer
- Always try to stay calm and confident throughout the process

Preparation Strategy

- Data structures and Algorithms play a very crucial role in most of the Online assessments and interviews. Choose one coding sheet or youtube channel to follow consistently, and prioritize solving quality questions over the quantity of problems.

Platforms: Leetcode, GFG, Hackerank, Codeforces

Attend coding contests to find out your strengths and weaknesses. Revise a few standard interview problems before the interview rounds.

- Have a strong command on the basic CS fundamentals. Prepare them when you find free time or semester holidays which will be very useful when you want to revise before the interview since you'll have very little time once the placements start.

Resume: Be honest and thorough with your resume. Be familiar with the details of each project, including the tech stack used, the reasons for choosing those technologies, and the project's purpose and impact.

- Communicate Effectively - Clearly explain your thought process and project details during interviews.
- Stay prepared and calm and do not compare yourselves with others,
- Rejections help you to grow better and gain a better understanding of the interview process

Hope is a good thing, maybe the best of things, and no good thing ever dies
