

Dhanushkumar Sankar - Information Technology

Intern + FTE in RAMCO Systems

About the Company

Ramco Systems is a global enterprise software company based in Chennai, India, specializing in cloud-based ERP, HCM, and aviation solutions. It serves industries like manufacturing, logistics, and aviation. The company has a global presence, supporting clients in over 20 countries. Known for innovation, it offers opportunities to work on cutting-edge technologies and diverse industries.

About the Role

Role: Full Stack Developer

As a full-stack developer for aviation software, your role involves building and maintaining both frontend and backend systems. You will work on features like fleet management, maintenance tracking, and operational analytics, integrating technologies like cloud, AI, and databases to enhance performance and user experience.

Selection Process

1. Online Assessment
2. Technical Round 1
3. Technical Round 2

Online Assessment (2 hrs 15 mins)

- Conducted via SHL, taken by around 200 candidates (CS/IT/ECE).
- 27 MCQs focused on debugging outputs and technical questions on CS fundamentals.
- Full-Stack Question:
 - Initial code provided.
 - Task: Write backend routes in Django and frontend functions in React.js.

Result: 40 candidates shortlisted from this round.

Technical Round 1 (30 mins)

Focus Areas:

- Projects, DSA, and OOPs.
- Questions asked:
 1. [Find Duplicates in Sorted Array](#)
 2. [Robot Return to Origin](#)

Result: 4 candidates shortlisted.

Technical Round 2 (Nearly 2 hrs)

Focus Areas:

- DSA, Problem Solving, and Thinking.
- Questions asked:
 1. [Binary Tree Level Order Traversal](#)
 2. Create a custom data structure for Notepad (copy, cut, paste functionality).
 3. Puzzle: Minimum number of coins needed to provide any amount between 1-100.
Answer: 7 coins {1, 2, 4, 8, 16, 32, 64}.

Outcome: All 4 candidates were selected.

Previous Interview Experience

In my previous interview at Everstage, DSA helped me reach the last round. However, I was rejected due to weak theoretical knowledge. This taught me the importance of balancing DSA preparation with theory subjects. Don't ignore theory; study it alongside DSA.

Preparation Strategy

DSA

DSA highlights your ability to solve problems. Focus on [Striver's SDE Sheet](#) and Leetcode [Interview 150](#) for targeted preparation.

Resources:

- Striver's playlists on YouTube.
- Striver's resources provide everything needed to excel in DSA.

Revise these playlists before interviews to showcase your skills effectively.

Projects

Know your project thoroughly. Common questions include:

1. Why did you choose this tech stack/database? Why not another?
2. What was your role?
3. Explain the architecture and flow of your project.
4. Challenges faced during implementation.

Avoid adding fake projects to your resume. Learn basic GitHub commands to demonstrate project management knowledge.

SQL

Practice basic SQL Questions and try to do [SQL 50](#) from LeetCode

Resume

Keep your resume concise, listing only the skills you're confident about. Companies don't expect you to know their tech stack but want to assess how well you can apply what you know.

Theory Subjects

Focus on key topics from InterviewBit and GeeksforGeeks (GFG):

- OOPs: [OOPs Sheet](#), [GFG](#).
- DBMS: [InterviewBit](#), [GFG](#).
- OS: [GFG](#).
- CN: [GFG](#).
- Git: [W3Schools](#).

Understand these concepts thoroughly instead of memorizing everything.

General Tips

- Don't lose hope ,keep trying

All the best Guys !
