

RandomWalk.Ai - Ratish M S

About the role:

Full stack development
App development
AI Engineer

Drive Flow:

- 1) The selection of this company was different from other companies like we don't have any online test. Instead of that, we need to do a simple project and take a video(demonstration of that project) and they will give the github repository and we have to upload that in that.
- 2) The projects are on the basis of what we are good at. They will circulate a form regarding in which you are good at. For us, the splits are web development using plain js (no frameworks added), application development and data science and analytics.
- 3) The project given for each splits will be given below.
- 4) They will look at our projects and shortlist the students and they conducted 2 rounds of virtual interview.

Project given for first round:

Name	Project
Web development	Tic Tac Toe
Data Analytics	Given an dataset, do regression and all
App development	I don't remember..

- 1) The video should be recorded and should be uploaded in github repository which they provide.
- 2) The project can be simple and it should have some objectives and functionalities.(add some creativity).
- 3) They have given one day for doing this project.

Technical round 1:

- 1) He asked me to introduce myself and he directly moved on into my projects and he asked me to explain the any project of my wish.
- 2) Then he asked whether I have hosted the project but I haven't hosted that and I only have that project in my github not even in local machine.
- 3) Then he asked about the final year project and I started explaining that and he got impressed with that one.
- 4) He asked me to run that project and asked me to explain the code accordingly.
- 5) He haven't asked why have you done this like this but he needs whether I can explain the project what I have done.
- 6) Then he asked some of the HR based questions and closed the session.

Technical round 2:

- 1) This round is the final round, also the virtual round and I think, this will the HR round but this also the technical round.
- 2) This round is totally different from the first technical round.
- 3) The interviewer only asked what I have in my resume even the certifications and all.
- 4) First he asked questions on data science like why numpy is used and explain me any one of the model you used.
- 5) I have my leetcode account link in my resume and he opened that and asked me like what is the use of coding.
- 6) He asked me to explain any challenging question in leetcode that you have solved and code that question and he doesn't give me the question and the question is of my choice.
- 7) At last, he too asked some HR based question and closed the session.

Shortlisted details and time taken for next update:

Round	Count of shortlists	Time taken for update
1	All eligible students	One week after the date given in the drive
Tech 1	15	This update was given after one week of project round
Tech 2	3	This update was given after three weeks of technical round 1

After one week the selected update for given and Only me got selected.
Out of 15, they took only 1.

Note:

- 1) I have chosen the web development project and I have interviewed different with respect to data science.
- 2) The interview panel was very kind and they will wait even you have lost your internet connection but make sure that the network is good.
- 3) Have any running project in your system. This will be very helpful for any virtual interviews.
- 4) Be patience in applying to this drive and the process took nearly one month.
