

Solartis Interview Experience

About Company:

Solartis Technology Services Pvt. Ltd

A leading Insurance technology provider that specializes in cloud-native, microservices-based policy administration platforms for the Property & Casualty (P&C) insurance market. Solartis LLC is headquartered in Manhattan Beach, California, with major Indian delivery and operations centers in Chennai (DLF IT Park), Madurai, and Coimbatore. It employs approximately 550 staff members globally comprising software engineers, business analysts, and insurance operations specialists.

Selection Process:

1. Online Test
2. Technical Interview
3. HR Interview

Round 1: Online Assessment

[60 mins]

Each section is time bounded with 15 minutes each and max of 30 questions per section.

Topics covered are

Quantitative Aptitude: Focus on basic arithmetic - Percentages, Profit & Loss, Ratios and Averages.

Logical Reasoning: Number series, coding-decoding, attention to detail and blood relations.

Puzzles: Simple analytical puzzles that require quick thinking.

Personality Test: How fit you are to the company culture.

Round 2: Technical Interview

[25 mins]

1. Project in-depth discussion

Your projects are the star of the show.

Be prepared to explain:

What is the need for the project ?

Reason for tech stack chosen

Discuss a specific technical issue you faced and how you solved it.

Can you draw the flow of your project?

2. Core CS concepts

You must have a solid grip on below stuffs :

Definitions and real-world examples of Inheritance, Polymorphism, Encapsulation and Abstraction.

Differences between Abstract Classes and Interfaces.

Overall knowledge of any kind of database questions (Eg. Distributed Systems, why cloud is preferred, etc)

Writing basic to intermediate queries (Joins, Group By, Aggregate functions). Even explaining the logical working of such queries is enough.

3. Domain Knowledge

Solartis has been integrating AI & ML into their workflow. Even showing awareness is a huge advantage.:

Basic Knowledge of AI and ML

Know the high-level concept of RAG how an LLM uses external data to provide accurate answers.

If you have worked on chatbots, explain the intent recognition or flow logic.

Round 3: HR Interview

[10 mins]

This is more of a conversation than an interview. They are looking for commitment. They want to know if you are actually interested in the job or just looking for any offer. They might not give you a specific job title immediately but expect it to be AI and ML focused. They will walk you through the company's culture and the pay structure. It is very chill so just be polite and show that you are ready to grow with them.

Preparation Tips:

Though this interview didnot focus on Data Structures and Algorithms, it is the most important for software engineering roles. So try to put much effort on DSA even before start of placement drive. Take notes for DSA for revision.

Focus on core CS subjects like OOPs, DBMS, OS, Networks, Basic AI, ML, Data Science. OOPs amd DBMS are the most important among them. Other subjects are important pertaining to the company and job role.

There are more possibilities of companies to hire you for AI and Data Science roles. So it is preferred to have such kind of projects and knowing strong fundamentals of them.

Focus on some aptitude kind of problem solving. Some companies will be having aptitude test. Though aptitude is not given much importance on on-campus placement, aptitude is everywhere in government exams and in service based companies and startups. So don't hesitate to spend time to learn it.
