

Placement Experience

Introduction:

Name : Sasikumar N

Branch : IT

Graduation Year : 2024

Company Placed : Standard Chartered GBS

Role : Development Engineer

Selection Process:

Round 1:

For me the round was the technical round in which they asked me to design the problem statement they had given

PS: Need a design a system for the persons waiting in the lobby for an interview in which the time is allotted for 30mins. If the interview has not completed within the given time a notification has to be sent to the interviewer and after 30 mins that person name has to be deleted in the waiting list and to put in the completed list.

Solution: Database Design in which the concepts of triggers and procedures to be used for notification.

and basic SQL queries and my current project working

Round 2:

No technical Questions were asked. Only general questions

Asked about any Experience in AI & ML and IOT related stuff

Round 3:

Full personal questions and nothing related to tech or general questions

Tips:

Constantly do coding in any of the online platforms like leetcode, hackerrank, codecheef.

Start with easy and then gradually progress to medium and hard.

Top companies may go for tough questions but mostly questions will be easy to medium.

Don't get too stressed for missing companies, obviously with some little efforts you can get placed easily.

Include what you know confidently in the resume. Mostly interviewers won't prepare questions themselves. Upon seeing your resume they ask questions.
