

Interview Experience

Name: Adhithyan S

Roll No: 2018115006

Company: Tekion Corp

Round 1: Online coding round

This round was conducted on the Hackerearth platform. Two coding questions were asked and I was able to solve both. The questions are as follows

1. Minimum size of the board ([Minimum Size Of a board | Practice Problems](#))
2. You are given a smartphone with an efficient charger. The initial amount of the charge in the smartphone is S, it charges the smartphone at different rates depending upon the amount of charge available in the phone to prevent the battery of the phone from any damage. Assuming that the current amount of charge available in the phone is C, the rates at which the phone is charged

R in units per minute are as follows:

Assuming the current charge level is C, the rates R of charging are (in units per minute)

$0 \leq C \leq 10$, $R = 10$

$11 \leq C \leq 230$, $R = 5$

$231 \leq C \leq 559$, $R = 8$

$560 \leq C \leq 1009$, $R = 2$

$1010 \leq C \leq 5000$, $R = 7$

$5001 \leq C \leq 10000$, $R = 8$

$10001 \leq C \leq 1000000000$, $R = 3$

Round 2: Technical Interview 1

The interviewer introduced himself and asked me to introduce myself. He asked some technical questions like

1. What are the ACID properties?
2. What are the necessary conditions for deadlock?
3. Explain the concepts of OOPS
4. What is class and object in OOPS?
5. What is Heap Sort?

Next he asked me to screen share the IDE and jumped into coding questions.

1. Implement heap sort.
2. Check if a given Binary Tree is a BST.

Round 3: Technical Interview 2

It began with my introduction and he asked some questions about my projects. He directly asked coding questions.

1. Print the maximum contiguous subarray sum
2. Given an array consisting of 0, 1 and -1 print all the subarrays with a given sum.

Round 4: HR Interview

Usual HR interview full of behavioral questions for 30 mins.
